**Murali Rao\*** ([rao@math.ufl.edu](mailto:rao@math.ufl.edu)), Department of Mathematics, University of Florida, Gainesville, FL 32611, and **Li-chien Shen** ([shen@math.ufl.edu](mailto:shen@math.ufl.edu)), Department of Mathematics, University of Florida, Gainesville, FL 32611. *On a certain integral equation.*

Pollack and Slepian studied, in great detail, an integral operator arising in the context of band-limited functions. This operator is compact and hence has discrete spectrum. We study integral operators whose kernels are of exponential type and square summable. These are noncompact. We show that the spectrum is continuous. (Received September 28, 2000)
