*Convergencial Properties.* Preliminary report.

If  $(X,S)$  and  $(Y,T)$  are homeomorphic topological spaces such that  $X$  has property  $P$  if and only if  $Y$  also has property  $P$ , then we say that the property  $P$  is topological. The spaces are said to be topologically invariant. The purpose of this paper is to study some invariance properties of homeomorphic biconvergence spaces  $(X,A,B)$  and  $(Y,C,D)$ .
