This presentation will describe the effective use of various sources of statistical data on the World Wide Web. Government agencies, polling agencies, and other sources of on-line data will be explored to find interesting data sets to be used in the statistics classroom. While there is a great deal of useful and interesting data available on the World Wide Web, it is not always obvious where it is or how to find it. We will discuss effective techniques for searching for sample data by subject area and we will demonstrate how this material can be integrated into a statistics class in an interesting and timely manner.
