Steven M. Hetzler* (smhetzler@ssu.edu), Department of Mathematics & Computer Science, Salisbury State University, Salisbury, MD 21801, and **Robert M. Tardiff** (rmtardiff@ssu.edu), Department of Mathematics & Computer Science, Salisbury State University, Salisbury, MD 21801. *A Discussion: How Standards and Assessment Might Improve Undergraduate Mathematics Education*. Preliminary report.

Chesapeake College, Salisbury State University, and WorWic Community College are involved in a nationwide project, Quality in Undergraduate Education (QUE). The purpose of QUE is to develop processes for writing disciplinary standards and for developing assessment tools for those standards for undergraduate education. The objective in developing these standards and assessment tools is to improve student learning. This project brings together faculty from four-year colleges with faculty from two-year colleges whose students frequently transfer to the four-year institution. It is hoped that this collaboration will lead to a process that other such partnerships can apply to develop standards and assessment tools for three stages of a student's career: entering Freshman, rising Junior, and graduating Senior. The purpose of this talk is to inform the mathematics community about QUE and to invite discussion, response, and involvement. For current status of QUE, and information on becoming involved, please visit the QUE website: <http://www.gsu.edu/~wwwque/> (Received September 14, 2000)
