

Meeting: 998, Houston, Texas, SS 6A, Special Session on Continuum Theory and General Topology (in Honor of David Bellamy's 60th Birthday)

998-54-230 **David P. Bellamy*** (05789@udel.edu), Department of Mathematical Sciences, University of Delaware, Newark, DE 19716. *Problems, in and out of context.*

R H Bing was fond of saying that it is our responsibility to leave our field with more problems, and easier problems, than we found. In this spirit, I shall discuss a variety of unsolved problems. For some, I will provide background and discussion. Others, I may merely pose without comment. (Received February 27, 2004)
