University of Richmond, Richmond, VA 23229. *Emil Artin in America: A Time of Transition.*

This talk gives an overview of Artin's life in America from 1937-1958. Set within the larger context of American mathematics, we give especial attention to the critical times of transition that took Artin to and from Notre Dame, Indiana University and Princeton. We also discuss Artin's mathematical contributions as well as more general issues related to the influx of European mathematicians into American mathematics at the time. (Received January 22, 2006)
