Jason Behrstock, Mladen Bestvina and Matt Clay* (mclay@math.ou.edu), Department of Mathematics, University of Oklahoma, Norman, OK 73019-0315. Growth of intersection numbers for free group automorphisms.

Guirardel defined an intersection number i(T, T') between two trees equipped with an action of a finitely generated group. We compute the growth of this intersection number $i(T, T\phi^n)$ where $T \in cv_k$ and ϕ is a fully irreducible automorphism. (Received February 05, 2008)
