James T Gill* (gill@math.washington.edu), University of Washington, Department of Mathematics, Box 354350, Seattle, WA 98195, and **Steffen Rohde**. *On the Riemann surface type of Random Planar Maps.*

We show that the (random) Riemann surfaces of the Angel-Schramm Uniform Infinite Planar Triangulation and of Sheffield's infinite necklace construction are both parabolic. In other words, Brownian motion on these surfaces is recurrent. We obtain this result as a corollary to a more general theorem on subsequential distributional limits of random unbiased disc triangulations, following work of Benjamini and Schramm.
