James Dabbs* (jamesdabbs@gmail.com). *Some countably compact, countably tight, non-compact spaces.*

We give a simple topological construction of a class of separable, countably compact, countably tight, non-sequential, non-compact spaces which includes spaces first constructed by E. Manes using the concept of a monad. We then mention some applications and generalizations using this construction. (Received January 18, 2011)
