Constantin Costara and **Thomas Ransford*** (ransford@mat.ulaval.ca), Department of Mathematics and Statistics, Laval University, Quebec City, Quebec G1V 0A6, Canada. *Which de Branges–Rovnyak spaces are Dirichlet spaces (and vice versa)?* Preliminary report.

In 1997, Sarason showed that two apparently unrelated families of Hilbert spaces overlap, namely the local Dirichlet spaces of Richter–Sundberg, and the model spaces of de Branges–Rovnyak. This had interesting consequences. We investigate the precise extent of the overlap. (Received December 13, 2011)
