Adam Piggott* (adam.piggott@bucknell.edu), Department of Mathematics, Bucknell University, Lewisburg, PA 17837. *The automorphisms of McCullough-Miller space*. Preliminary report.

McCullough-Miller's space $X=X(W)$ is a topological model for a certain subgroup of the outer automorphism group of a free product of groups W . We will discuss the question of just how well X models $Out(W)$. In particular, we consider circumstances under which $Aut(X)$ is precisely $Out(W)$. (Received June 27, 2011)
