Andrei E Ghenciu* (eghenciu@ecok.edu), Ada, OK 74820, and **Mario Roy**. *Boundedly Supermultiplicative Shifts*. Preliminary report.

We introduce and study a class of shifts called essentially boundedly supermultiplicative. This large class contains all subshifts of finite type. We give several examples and we show how to compute the entropy for such systems. (Received November 30, 2012)
