**Karen Taylor\*** ([karen.taylor@bcc.cuny.edu](mailto:karen.taylor@bcc.cuny.edu)) and **Cormac O'Sullivan** ([sullivancormaco@gmail.com](mailto:sullivancormaco@gmail.com)). *Hyperbolic Fourier Coefficients of Modular Forms*. Preliminary report.

The number theoretic properties of (parabolic) Fourier coefficients of modular forms is vast. Petersson (1941) showed, in addition to parabolic expansions, that modular forms have elliptic and hyperbolic expansions. This is a preliminary report on explicit formulae for hyperbolic Fourier coefficients of modular forms. (Received August 18, 2013)
