**Silas Johnson\*** ([sjohnson@math.wisc.edu](mailto:sjohnson@math.wisc.edu)). *Alternate Discriminants and Mass Formulas for Number Fields*. Preliminary report.

Kedlaya and Wood have explored alternate invariants for number fields, with the idea of replacing the discriminant in standard field-counting questions with one of these alternate invariants. We further explore the space of “reasonable” invariants, expanding on Kedlaya and Wood’s definition. We also discuss a theorem on mass formulas for these invariants. (Received July 28, 2014)
