**Vyjayanthi Chari\*** ([chari@math.ucr.edu](mailto:chari@math.ucr.edu)). *BGG Reciprocity for Current Algebras.*

Given any affine Lie algebra the associated current algebra is a particular maximal parabolic subalgebra. The category of graded representations of the current algebra have close connections with the category of finite-dimensional representations of the quantum affine algebra.

In this talk, we shall first review these connections. We then discuss a BGG type reciprocity result for current algebras and the relationship with Macdonald polynomials. (Received July 29, 2014)
