Mustafa Hajj* (mhajj1@lsu.edu), Louisiana State University, Baton Rouge, 70802. *q-Series Identities From Pretzel Links*. Preliminary report.

The tail of the colored Jones polynomial is a q -power series alternating knot invariant. It has been shown that the tail of the colored Jones polynomial of $(2,p)$ torus knots give the Andrews Gordon identities for the two variable Ramanujan theta function as well as corresponding identities for the false theta function. In this talk we show some q -series identities that one can obtain from pretzel links. (Received July 11, 2015)
