David Cruz-Uribe and **Kabe Moen***, kabe.moen@ua.edu, and **Scott Rodney**. *Regularity results for weak solutions of elliptic PDEs below the natural exponent.*

We will discuss regularity results for weak solutions to the Dirichlet problem for a divergence form elliptic operator. We give L^p estimates for the second derivative when $p < 2$. Our work generalizes results due to Miranda. (Received August 19, 2014)
