Dyson School of Management, Cornell University, Ithaca, NY 14853, and **Todd Fenstermacher**, Department of Mathematical Sciences, Clemson University, Martin Hall O-103, Clemson, SC 29634. *Generalizing Integrality.*

In this talk will will examine some older and newer generalizations of integrality. The theme here will be to look at some types of “near integrality” that are between the concepts of integral and almost integral. Examples to compare and contrast these notions will be given and some new directions will be highlighted, especially in the context of valuation overrings. (Received September 07, 2016)
