Slimane Adjerid* (adjerids@vt.edu), Virginia Tech, Department of Mathematics, MC 0123, 225 Stanger St. 460 McBryde Hall, Blacksburg, VA 24060, and **Tao Lin**, **Nabil Chaabane** and **Kihyo Moon**. *High Order Immersed Finite Element Methods for Interface Problems*.

In this presentation we will give an overview of recent advances in immersed continuous and discontinuous finite methods for interface problems modeled by partial differential equations. We will discuss extensions of immersed finite element spaces and methods to obtain high order approximations of solutions for problems with curved interfaces. We will present results for linear elasticity, Stokes flow and wave propagation problems. (Received September 12, 2016)
