Pierre Py* (py@im.unam.mx) and **Thomas Delzant**. *Cubulable Kähler groups*.

We will explain why a Kähler group which acts geometrically on a CAT(0) cubical complex must be virtually isomorphic to a direct product of surface groups, possibly with a free Abelian factor. Along the way, we introduce a new criterion to obtain fibrations of closed Kähler manifolds over Riemann surfaces. This is a joint work with Thomas Delzant. (Received March 15, 2017)
