**Fengbo Hang\*** ([fengbo@cims.nyu.edu](mailto:fengbo@cims.nyu.edu)), 251 Mercer Street, New York, NY 10012, and **Paul Yang** ([yang@math.princeton.edu](mailto:yang@math.princeton.edu)). *Positivity issue for Q curvature equations in dimension 3.*

Fourth order Q curvature equation in dimension 3 is a semilinear equation with negative power on the right hand side. We will discuss several type of positivity conditions associated with this equation and the Paneitz operator and the relations among these conditions. (Received March 17, 2017)
