Velasco-Hernandez\*** ([jx.velasco@im.unam.mx](mailto:jx.velasco@im.unam.mx)), Cerro Coporo 16, Campestre Churubusco, Coyoacán, 04200 Mexico, CDMX, Mexico. *On the theoretical consequences of vector- and sexual transmission when simultaneously involved in the spread of an infectious disease.*

We describe some mathematical models framed in differential equations to understand the dynamics of spread of the Zika, considering vector and sexual transmission. The analysis of these models allows us to have a clear view of the effects of sexual transmission versus vector transmission in the spread of the virus (Received July 31, 2017)
