Jesse S F Levitt*, USC Dornsife, Department of Mathematics, 3620 S. Vermont Ave., KAP 104, Los Angeles, CA 90089, and **Milen Yakimov**. *Rigidity of quadratic Poisson tori*.

We describe a rigidity theorem regarding the automorphism groups of completed quadratic Poisson tori in characteristic 0. It yields a method for the explicit computation of the automorphism groups of N -graded connected cluster algebras with respect to the Gekhtman-Shapiro-Vainshtein Poisson structure. As an example, we will describe the automorphism groups of the coordinate rings of the Schubert cells of all symmetrizable Kac-Moody groups whose flag varieties are given the standard Poisson structure.
