

1151-20-256      **Amanda Taylor\*** ([tayloral@alfred.edu](mailto:tayloral@alfred.edu)). *The subgroup structure problem in  $PLo(I)$ .*

Groups of piecewise linear homeomorphisms provide a rich source of tangible examples for study of infinite groups. In this talk, we will discuss some subgroup structure results and open problems in the groups  $PLo(I)$  and Thompson's group  $F$ . (Received August 19, 2019)
