Berit Givens (vhm@tulane.edu) and **Victor Moll*** (vhm@tulane.edu), 6823 St. Charles Avenue, New Orleans, LA 70118. *The valuations of numbers coming from Fibonacci polynomials.*

Given a sequence $x(n)$ and a prime p , the p -adic valuation of $x(n)$ (defined as the highest power of p dividing $x(n)$) offers interesting behaviors. In this talk an example coming from Fibonacci polynomials is used to illustrate a general phenomenon. (Received September 05, 2019)
