Jeff Kahn and **Jinyoung Park*** (jinyoungpark0@gmail.com). *Tuza's Conjecture for random graphs.*

A celebrated conjecture of Zs. Tuza says that in any (finite) graph, the minimum size of a cover of triangles by edges is at most twice the maximum size of a set of edge-disjoint triangles. Resolving a recent question of Bennett, Dudek, and Zerbib, we show that this is true for random graphs; more precisely:

for any $p = p(n)$, $\mathbb{P}(G_{n,p} \text{ satisfies Tuza's Conjecture}) \rightarrow 1$ (as $n \rightarrow \infty$).
