A Alishahi* (akram.alishahi@uga.edu), **V Földvári**, **K Hendricks**, **J Licata**, **I Petkova**
and **V Vértesi**. *A Contact invariant from Heegaard Floer homology.*

Several effective and powerful invariants have been defined using Heegaard Floer homology over the past two decades. We will describe a new addition to this collection which behaves nicely under gluing. This invariant is defined for a contact 3-manifold with a foliated boundary and lives in the bordered sutured Floer homology. This is joint work with Földvári, Hendricks, Licata, Petkova, and Vertesi. (Received September 21, 2021)
