Left-orderable slopes of classical pretzel knots.

L-spaces are 3-manifolds with minimal Heegaard Floer homology. The L-space conjecture of Boyer, Gordon and Watson states that an irreducible rational homology 3-sphere is an L-space if and only if its fundamental group is not left-orderable. In this talk, we will discuss this conjecture for 3-manifolds obtained by Dehn surgeries on classical pretzel knots. (Received September 14, 2021)
