Hongwei Wang*, 5201 University Blvd LBV 315, Laredo, TX 78045. *How did COVID-19 lockdown affect Hispanic University students' daily life?*

COVID-19 has changed people's life dramatically in many ways. Due to the lockdown during the pandemic, students' normal schedule has been so much different from before. In this article, we design the questionnaire asking questions about the well-being before and during COVID-19 lockdown, send it to students at Texas A&M International University located in South Texas, and analyze the changes caused by the lockdown in their daily food, physical activities and sleep pattern. Results do show that lockdown during the COVID-19 has decreased the time students spent on physical activities and sleep every week. Surprisingly, the effect lockdown has had on Body Mass Index (BMI) is not significant. (Received September 17, 2021)
