Sema Gunturkun* (sgunturkun@amherst.edu) and Mel Hochster. Growth of the Hilbert function of ideals containing a regular sequence. Preliminary report.

Famous Macaulay’s theorem describes the growth of Hilbert functions of homogeneous ideals in $K[x_1, \ldots, x_n]$. Eisenbud, Green and Harris conjectured a finer bound on the Hilbert function so that it associates with the structure of the ideal such as the degrees of a regular sequence it contains. In this talk, we discuss the current state of this conjecture, and especially focus on the ideals containing a regular sequence of quadratic forms. This is a joint work with Mel Hochster.
