Tight closure began in a conversation with Mel Hochster at a conference at the University of Illinois in November of 1986. Serious work on tight closure began early in 1987, and the subject quickly took flight. Without Mel Hochster the topic of this manuscript would not exist, and these notes are a tribute to his beautiful ideas and immense contributions.

Many other people have helped me in both my thinking and writing. I owe special thanks to Ian Aberbach, Bill Heinzer, Joe Lipman, Karen Smith, and Irena Swanson. I thank Janet Cowden for proofreading the entire manuscript.

These notes are based on ten talks I gave at a CBMS conference at North Dakota State University June 22-29, 1995. A special thanks goes to the organizer, Joe Brennan. I am very grateful to him for the idea of having this conference, and for the time and effort he put into it to make it a success. His efforts made the conference both pleasant and enjoyable. I also thank North Dakota State University for hosting the conference, the Conference Board of the Mathematical Sciences for choosing this topic, and the National Science Foundation for funding it. I would like to thank the main supporting speakers: Ian Aberbach, Juergen Herzog, Mel Hochster, Joe Lipman, Paul Monsky, Paul Roberts, Karen Smith, Mark Spivakovsky, and Kei-ichi Watanabe. Their talks enhanced the conference greatly.

Finally, I thank the University of Michigan for support during my preparations for the conference.
