Preface

The last twenty years have seen an active interaction between mathematics and physics. This book is devoted to one of the new areas which deals with mathematical structures related to conformal field theory and its q -deformations. We discuss the interplay between Knizhnik-Zamolodchikov type equations, the Bethe ansatz method, representation theory, and geometry of multi-dimensional hypergeometric integrals.

This book aims to provide an introduction to the area and expose different facets of the subject. The book contains constructions, discussions of notions, statements of theorems, and illustrating examples. The exposition is restricted to the simplest case of the theory associated with the Lie algebra \mathfrak{sl}_2 .

The book consists of six chapters.

In Chapter 1 the Knizhnik-Zamolodchikov equation is realized as a Gauss-Manin connection, that is as the differential equation for multi-dimensional hypergeometric integrals.

In Chapter 2 the space of hypergeometric solutions of a Knizhnik-Zamolodchikov equation is identified with the multiplicity space of the tensor product of representations of the corresponding quantum group. This identification allows one to identify the monodromy group of the Knizhnik-Zamolodchikov equation with the R-matrix representation of the braid group.

In Chapter 3 determinant formulas for hypergeometric integrals are discussed. The determinant formulas allow one to conclude that the hypergeometric solutions give all solutions to the Knizhnik-Zamolodchikov equation. The second topic of Chapter 3 is the dynamical equations. The dynamical equations are equations complementary to the Knizhnik-Zamolodchikov equations. In the simplest example the equations respectively become the Gauss contiguous function relations and the Euler hypergeometric differential equation for the classical hypergeometric function.

In Chapter 4 the relations between the Bethe ansatz method and quasi-classical asymptotics of hypergeometric functions are discussed.

Chapter 5 is devoted to elliptic hypergeometric functions, their modular properties, and relations to Macdonald polynomials and traces of intertwining operators.

In Chapter 6 we explain how the geometric theory of the Knizhnik-Zamolodchikov differential equation has to be quantized to give solutions to the quantum Knizhnik-Zamolodchikov difference equation.

The book grew out of graduate courses at UNC in the fall of 2001, at MIT in the spring of 2002, and ten lectures given by the author at the NSF-CBMS Conference “Arrangements and Mathematics Physics”, at Louisiana State University, Baton Rouge, during the week of January 11-15, 2002.

I am grateful to students in my courses: A. Boysal, M. Graña, S. Lau, I. Mencattini, A. Oblomkov, V. Ostrik, L. Stevens, J. Scott, and to my colleagues: I. Cherednik, D. Cohen, J. Damon, P. Eberlein, P. Etingof, G. Felder, Y. Markov, E. Mukhin, P. Orlik, I. Scherbak, V. Tarasov, H. Terao for many valuable discussions. My special thanks are to Daniel Cohen who organized the conference in Baton Rouge.

Titles in This Series

- 98 **Alexander Varchenko**, Special functions, KZ type equations, and representation theory, 2003
- 97 **Bernd Sturmfels**, Solving systems of polynomial equations, 2002
- 96 **Niky Kamran**, Selected topics in the geometrical study of differential equations, 2002
- 95 **Benjamin Weiss**, Single orbit dynamics, 2000
- 94 **David J. Saltman**, Lectures on division algebras, 1999
- 93 **Goro Shimura**, Euler products and Eisenstein series, 1997
- 92 **Fan R. K. Chung**, Spectral graph theory, 1997
- 91 **J. P. May et al.**, Equivariant homotopy and cohomology theory, dedicated to the memory of Robert J. Piacenza, 1996
- 90 **John Roe**, Index theory, coarse geometry, and topology of manifolds, 1996
- 89 **Clifford Henry Taubes**, Metrics, connections and gluing theorems, 1996
- 88 **Craig Huneke**, Tight closure and its applications, 1996
- 87 **John Erik Fornæss**, Dynamics in several complex variables, 1996
- 86 **Sorin Popa**, Classification of subfactors and their endomorphisms, 1995
- 85 **Michio Jimbo and Tetsuji Miwa**, Algebraic analysis of solvable lattice models, 1994
- 84 **Hugh L. Montgomery**, Ten lectures on the interface between analytic number theory and harmonic analysis, 1994
- 83 **Carlos E. Kenig**, Harmonic analysis techniques for second order elliptic boundary value problems, 1994
- 82 **Susan Montgomery**, Hopf algebras and their actions on rings, 1993
- 81 **Steven G. Krantz**, Geometric analysis and function spaces, 1993
- 80 **Vaughan F. R. Jones**, Subfactors and knots, 1991
- 79 **Michael Frazier, Björn Jawerth, and Guido Weiss**, Littlewood-Paley theory and the study of function spaces, 1991
- 78 **Edward Formanek**, The polynomial identities and variants of $n \times n$ matrices, 1991
- 77 **Michael Christ**, Lectures on singular integral operators, 1990
- 76 **Klaus Schmidt**, Algebraic ideas in ergodic theory, 1990
- 75 **F. Thomas Farrell and L. Edwin Jones**, Classical aspherical manifolds, 1990
- 74 **Lawrence C. Evans**, Weak convergence methods for nonlinear partial differential equations, 1990
- 73 **Walter A. Strauss**, Nonlinear wave equations, 1989
- 72 **Peter Orlik**, Introduction to arrangements, 1989
- 71 **Harry Dym**, J contractive matrix functions, reproducing kernel Hilbert spaces and interpolation, 1989
- 70 **Richard F. Gundy**, Some topics in probability and analysis, 1989
- 69 **Frank D. Grosshans, Gian-Carlo Rota, and Joel A. Stein**, Invariant theory and superalgebras, 1987
- 68 **J. William Helton, Joseph A. Ball, Charles R. Johnson, and John N. Palmer**, Operator theory, analytic functions, matrices, and electrical engineering, 1987
- 67 **Harald Upmeyer**, Jordan algebras in analysis, operator theory, and quantum mechanics, 1987
- 66 **G. Andrews**, q -Series: Their development and application in analysis, number theory, combinatorics, physics and computer algebra, 1986
- 65 **Paul H. Rabinowitz**, Minimax methods in critical point theory with applications to differential equations, 1986
- 64 **Donald S. Passman**, Group rings, crossed products and Galois theory, 1986
- 63 **Walter Rudin**, New constructions of functions holomorphic in the unit ball of C^n , 1986

TITLES IN THIS SERIES

- 62 **Béla Bollobás**, Extremal graph theory with emphasis on probabilistic methods, 1986
- 61 **Mogens Flensted-Jensen**, Analysis on non-Riemannian symmetric spaces, 1986
- 60 **Gilles Pisier**, Factorization of linear operators and geometry of Banach spaces, 1986

- 26 **I. Reiner**, Class groups and Picard groups of group rings and orders, 1976
- 25 **K. W. Gruenberg**, Relation modules of finite groups, 1976
- 24 **M. Hochster**, Topics in the homological theory of modules over commutative rings, 1975
- 23 **M. E. Rudin**, Lectures on set theoretic topology, 1975

For a complete list of titles in this series, visit the
AMS Bookstore at www.ams.org/bookstore/.

The last twenty years have seen an active interaction between mathematics and physics. This book is devoted to one of the new areas which deals with mathematical structures related to conformal field theory and its q -deformations. We discuss the interplay between Knizhnik-Zamolodchikov type equations, the Bethe ansatz method, representation theory, and geometry of multi-dimensional hypergeometric functions.

This book aims to provide an introduction to the area and expose different facets of the subject. The book contains constructions, discussions of notions, statements of main results, and illustrating examples. The exposition is restricted to the simplest case of the theory associated with the Lie algebra \mathfrak{sl}_2 .

This book is intended for researchers and graduate students in mathematics and in mathematical physics, in particular to those interested in applications of special functions.
