Geometry of Normed Linear Spaces

Proceedings of a Conference held June 9–12, 1983 in honor of Mahlon Marsh Day
CONTEMPORARY MATHEMATICS

Titles in This Series

Volume

1 Markov random fields and their applications. Ross Kindermann and J. Laurie Snell
2 Proceedings of the conference on integration, topology, and geometry in linear spaces. William H. Graves, Editor
3 The closed graph and P-closed graph properties in general topology. T. R. Hamlett and L. L. Herrington
4 Problems of elastic stability and vibrations. Vadim Komkov, Editor
5 Rational constructions of modules for simple Lie algebras. George B. Seligman
6 Umbral calculus and Hopf algebras. Robert Morris, Editor
7 Complex contour integral representation of cardinal spline functions. Walter Schempp
8 Ordered fields and real algebraic geometry. D. W. Dubois and T. Recio, Editors
9 Papers in algebra, analysis and statistics. R. Lidl, Editor
10 Operator algebras and K-theory. Ronald G. Douglas and Claude Schochet, Editors
11 Plane ellipticity and related problems. Robert P. Gilbert, Editor
12 Symposium on algebraic topology in honor of José Adem. Samuel Gitler, Editor
13 Algebraists' homage: Papers in ring theory and related topics. S. A. Amitsur, D. J. Saltman, and G. B. Seligman, Editors
14 Lectures on Nielsen fixed point theory. Boju Jiang
15 Advanced analytic number theory. Part I: Ramification theoretic methods. Carlos J. Moreno
16 Complex representations of GL(2, K) for finite fields K. Ilya Piatetski-Shapiro
17 Nonlinear partial differential equations. Joel A. Smoller, Editor
18 Fixed points and nonexpansive mappings. Robert C. Sine, Editors
20 Low dimensional topology. Samuel J. Lomonaco, Jr., Editor
22 Factorizations of $b^n \pm 1$, $b = 2, 3, 5, 6, 7, 10, 11, 12$ up to high powers. John Brillhart, D. H. Lehmer, J. L. Selfridge, Bryant Tuckerman, and S. S. Wagstaff, Jr.
23 Chapter 9 of Ramanujan's second notebook—Infinite series identities, transformations, and evaluations. Bruce C. Berndt and Padmini T. Joshi
24 Central extensions. Galois groups, and ideal class groups of number fields. A. Fröhlich
25 Value distribution theory and its applications. Chung-Chun Yang, Editor
26 Conference in modern analysis and probability. Richard Beals, Anatole Beck, Alexandra Bellow, and Arshag Hajian, Editors
Titles in This Series

Volume

27 Microlocal analysis, M. Salah Baouendi, Richard Beals, and Linda Preiss Rothschild, Editors
28 Fluids and plasmas: geometry and dynamics, Jerrold E. Marsden, Editor
29 Automated theorem proving, W. W. Bledsoe and Donald Loveland, Editors
30 Mathematical applications of category theory, J. W. Gray, Editor
31 Axiomatic set theory, James E. Baumgartner, Donald A. Martin, and Saharon Shelah, Editors
32 Proceedings of the conference on Banach algebras and several complex variables, F. Greenleaf and D. Gulick, Editors
33 Contributions to group theory, Kenneth I. Appel, John G. Ratcliffe, and Paul E. Schupp, Editors
34 Combinatorics and algebra, Curtis Greene, Editor
35 Four-manifold theory, Cameron Gordon and Robion Kirby, Editors
36 Group actions on manifolds, Reinhard Schultz, Editor
37 Conference on algebraic topology in honor of Peter Hilton, Renzo Piccinini and Denis Sjerve, Editors
38 Topics in complex analysis, Dorothy Brown Sather, Editor
39 Errett Bishop: Reflections on him and his research, Murray Rosenblatt, Editor
40 Integral bases for affine Lie algebras and their universal enveloping algebras, David Mitzman
41 Particle systems, random media and large deviations, Richard Durrett, Editor
42 Classical real analysis, Daniel Waterman, Editor
43 Group actions on rings, Susan Montgomery, Editor
44 Combinatorial methods in topology and algebraic geometry, John R. Harper and Richard Mandelbaum, Editors
45 Finite groups—coming of age, John McKay, Editor
46 Structure of the standard modules for the affine Lie algebra $A_{1}^{(1)}$, James Lepowsky and Mirko Primc
48 Analytic functions of one complex variable, Chung-chun Yang and Chi-tai Chuang, Editors
49 Complex differential geometry and nonlinear differential equations, Yum-Tong Siu, Editor
50 Random matrices and their applications, Joel E. Cohen, Harry Kesten, and Charles M. Newman, Editors
51 Nonlinear problems in geometry, Dennis M. DeTurck, Editor
Geometry of Normed Linear Spaces
Mahlon Marsh Day
Geometry of Normed Linear Spaces

Proceedings of a Conference held June 9–12, 1983 in honor of Mahlon Marsh Day

R. G. Bartle, N. T. Peck, A. L. Peressini, and J. J. Uhl, Editors
The Conference on the Geometry of Normed Linear Spaces was held, in honor of Mahlon Marsh Day, at the University of Illinois at Urbana-Champaign, June 9-12, 1983. The conference was supported by the National Science Foundation, Grant MCS 83-01738, and the Research Board of the University of Illinois.

1980 Mathematics Subject Classification (1985 Revision). Primary 46B99, 46-06.

## Contents

Foreword ix  
Acknowledgments xi  

Finite dimensional decompositions in Banach spaces 1  
P. G. Casazza  

Some theorems on the geometry of Banach spaces arising from the study of invariant means 32  
Edmond E. Granirer  

The Radon-Nikodym and Krein-Milman properties for convex sets 43  
Robert C. James  

The metric linear spaces \( L_p \) for \( 0 < p < 1 \) 55  
N. J. Kalton  

The unconditional basic sequence problem 70  
Haskell P. Rosenthal  

A lemma on matrices and its applications 89  
Piotr Antosik  

Applications of geometry of infinite dimensional spaces to vector measures 96  
R. G. Bilyeu and P. W. Lewis  

Minimax theorems without convexity 102  
M. A. Geraghty and Bor-Luh Lin  

Approximative compactness in Kadec-Klee spaces 109  
Robert E. Megginson  

Gul'ko's proof of the Amir-Lindenstrauss theorem 113  
I. Namioka and R. F. Wheeler  

Continuous selections of complemented subspaces 121  
Horacio Porta and Lázaro Recht  

Exposed points and the Radon-Nikodym property 126  
Elias Saab  

On complemented copies of \( c_0 \) in injective tensor products 131  
Elias Saab and Paulette Saab  

A note on girth and isomorphic classification of normed spaces 136  
Juan Jorge Schaffer  

Rotundity and extremity in \( l^p(X_1) \) and \( L^p(\mu, X) \) 143  
Mark A. Smith  

Orthogonality and linear homomorphisms in Banach lattices 163  
K. Sundaresan and S. Swaminathan  

Daysong 170  
Bruce Reznick
Foreword

Mahlon Marsh Day was a faculty member at the University of Illinois from 1940 to 1983, and still is active there in his retirement. His influence has been felt through his pioneering articles and his classic monograph, "Normed Linear Spaces", and through his students—undergraduate and graduate.

Mahlon Day, J. A. Clarkson, and Nelson Dunford are all mathematical brothers; all were thesis students of J. D. Tamarkin at Brown University, where Day received his Ph.D. in 1939. He has long been fascinated by all forms of rotundity and convexity, and has been heard to joke, "If I can draw a picture of it, then I can prove it!" He was the first American mathematician to study normed spaces from a geometric standpoint and, for a number of years, he and R. C. James were the only American mathematicians working on the structure of Banach spaces. In recognition of the variety of Day's contributions to Banach space theory each of the main speakers at the conference was invited to take some aspect of Day's work as a starting point for his lecture. Several of Day's students contributed papers to these proceedings.

From 1958 to 1965, at a critical time for the Illinois mathematics department, he served at its Head. He gave needed leadership and significantly shaped the future course of the department. Today, his is a welcome and familiar face in seminars; he is active as an editor and in matters of the Illinois Journal; and he still teaches an occasional course.

His home and extended family are important to him and to his wife, Frankie. They are active members of the Society of Friends and take their beliefs seriously. Their home is always open to anyone who needs a home, whether direct family, foster children, refugees, or misplaced mathematicians.

Mahlon is a profound source of information of all kinds on many topics—ranging from convexity and rotundity to CCC camps in Oregon (where he grew up), to interurban transit (a good way to get to Danville, in those days), to how the glaciers shaped the terrain of east central Illinois and what rivers they left behind.

From his beard, his very deep voice, his red jacket, his bluff yet merry manner and his wisdom, we do not know whether he is Moses or Santa Claus. But when he snoozes at a lecture, and wakes up to ask a penetrating
question that hadn't occurred to us, we are reminded that he is uniquely Mahlon. We salute him and wish him and Frankie well in their retirement.

The Organizing Committee

R. G. Bartle
N. T. Peck
A. L. Peressini
J. J. Uhl
Acknowledgments

We wish to thank: Pat Coombs and Betsy Gillies, for serving ably as conference secretaries; Jennifer Eickmann, for seeing to it that Allerton House hospitality never flagged; Hiram Paley, for his excellent conference photographs; Peter Casazza, for making same memorable; and Mabel Jones, for her patient, careful typing of the papers. We also thank the National Science Foundation and the Research Board of the University of Illinois for their support of the conference.
DAYSONG

by

Bruce Reznick

Once upon a thesis dreary, as I pondered weak and weary,
Looking for a reference to a theorem that had gone astray,
While I nodded, nearly napping, suddenly there came a tapping,
As of something gently snapping, snapping in my matter grey;
Just the notion of a bounded mapping in my matter grey.
How I wished it go away!

Presently do I recall now, my advisor in the hall now,
How the thought makes me feel small now, when Per Enflo told me: "Hey!
Banach space has yoost one standard, you mean you have yoost meandered
On your own and haven't gandered on the book by M. M. Day?
Get yourself a copy of the latest Normed Linear Spaces, the book of M. M. Day!"

Oh it was a revelation! How I stared in fascination,
When I saw the terse notation: PND implies QA.
What a book of condensation! What a job of integration!
What a tool for education! What a man, this M. M. Day!
Yes I went out to the Union, bought the book of M. M. Day;
Eighteen dollars did I pay.

So I bought it and I read it, but I add to my discredit,
Rapidly did I forget it, as I wrote my résumés.
Then I heard from P. T. Bateman: "Do not try to tempt your fate, man!"
Illinois' a groovy state, man!" (Here you note I paraphrase.)
"Take a job here, in the evenings, you may like the staff soirées,
In any case, you'll love the Days."

By the bronze of Alma Mater, by the Boneyard's rippling waters,
Mathematics was in Altgeld, and Illini, also Coble.
There I saw a man with white beard, pens in pocket, smile on visage,
Eyes a-twinkle, voice a-rumble, there I met him: Mahlon Day.
"Have some coffee. That much sugar? We'll get along," said Mahlon Day.
And he was right, I want to say.

Franky's not, in principle, the subject of our session,
But she's so much of Mahlon that I must make this digression.
Teacher, colleague, friend to students, counselor and mother,
Opening their house as refuge, keepers of their brother.
Franky, Mahlon: You're the youngest couple in Urbana,
And you'd keep the title if I throw in Indiana!
Illinois, in Banach Spaces, has so many stars and aces. Mahlon's uncondish'nal bass is all agreed to as our voice. Seminars and learned meetings, welcomes with the fondest greeting, You will hear his fans repeating: "Mahlon is the an'lyst's choice." Through the years in West Urbana, Altgeld's halls with pride rejoice: Mahlon is the an'lyst's choice."

Now, upon this banquet cheery, as we sit here, stuffed and beery, We should not feel sad and teary, for the man we toast today At this fine and festive dinner, eager as a fresh beginner, Going strong and still a winner, we salute you, Mahlon Day! Going strong and still a winner, we salute you, Mahlon Day!
