Volume
1  Markov random fields and their applications, Ross Kindermann and J. Laurie Snell
2  Proceedings of the conference on integration, topology, and geometry in linear spaces, William H. Graves, Editor
3  The closed graph and P-closed graph properties in general topology, T. R. Hamlett and L. L. Herrington
4  Problems of elastic stability and vibrations, Vadim Komkov, Editor
5  Rational constructions of modules for simple Lie algebras, George B. Seligman
6  Umbral calculus and Hopf algebras, Robert Morris, Editor
7  Complex contour integral representation of cardinal spline functions, Walter Schempp
8  Ordered fields and real algebraic geometry, D. W. Dubois and T. Recio, Editors
9  Papers in algebra, analysis and statistics, R. Lidl, Editor
10  Operator algebras and K-theory, Ronald G. Douglas and Claude Schochet, Editors
11  Plane ellipticity and related problems, Robert P. Gilbert, Editor
12  Symposium on algebraic topology in honor of José Adem, Samuel Gitler, Editor
13  Algebraists' homage: Papers in ring theory and related topics, S. A. Amitsur, D. J. Saltman, and G. B. Seligman, Editors
14  Lectures on Nielsen fixed point theory, Boju Jiang
15  Advanced analytic number theory. Part I: Ramification theoretic methods, Carlos J. Moreno
16  Complex representations of GL(2, K) for finite fields K, Ilya Piatetski-Shapiro
17  Nonlinear partial differential equations, Joel A. Smoller, Editor
18  Fixed points and nonexpansive mappings, Robert C. Sine, Editor
19  Proceedings of the Northwestern homotopy theory conference, Haynes R. Miller and Stewart B. Priddy, Editors
20  Low dimensional topology, Samuel J. Lomonaco, Jr., Editor
21  Topological methods in nonlinear functional analysis, S. P. Singh, S. Thomeier, and B. Watson, Editors
22  Factorizations of $b^n \pm 1$, $b = 2, 3, 5, 6, 7, 10, 11, 12$ up to high powers, John Brillhart, D. H. Lehmer, J. L. Selfridge, Bryant Tuckerman, and S. S. Wagstaff, Jr.
23  Chapter 9 of Ramanujan's second notebook—Infinite series identities, transformations, and evaluations, Bruce C. Berndt and Padmini T. Joshi
24  Central extensions, Galois groups, and ideal class groups of number fields, A. Fröhlich
25  Value distribution theory and its applications, Chung-Chun Yang, Editor
26  Conference in modern analysis and probability, Richard Beals, Anatole Beck, Alexandra Bellow, and Arshag Hajian, Editors
Titles in This Series

Volume

28 Fluids and plasmas: geometry and dynamics. Jerrold E. Marsden, Editor

29 Automated theorem proving. W. W. Bledsoe and Donald Loveland, Editors

30 Mathematical applications of category theory. J. W. Gray, Editor

31 Axiomatic set theory. James E. Baumgartner, Donald A. Martin, and Saharon Shelah, Editors

32 Proceedings of the conference on Banach algebras and several complex variables. F. Greenleaf and D. Gulick, Editors

33 Contributions to group theory. Kenneth I. Appel, John G. Ratcliffe, and Paul E. Schupp, Editors

34 Combinatorics and algebra. Curtis Greene, Editor

35 Four-manifold theory. Cameron Gordon and Robion Kirby, Editors

36 Group actions on manifolds. Reinhard Schultz, Editor

37 Conference on algebraic topology in honor of Peter Hilton. Renzo Piccinini and Denis Sjerve, Editors

38 Topics in complex analysis. Dorothy Browne Shaffer, Editor

39 Errett Bishop: Reflections on him and his research. Murray Rosenblatt, Editor

40 Integral bases for affine Lie algebras and their universal enveloping algebras. David Mitzman

41 Particle systems, random media and large deviations. Richard Durrett, Editor

42 Classical real analysis. Daniel Waterman, Editor

43 Group actions on rings. Susan Montgomery, Editor

44 Combinatorial methods in topology and algebraic geometry. John R. Harper and Richard Mandelbaum, Editors

45 Finite groups—coming of age. John McKay, Editor

46 Structure of the standard modules for the affine Lie algebra $A_1^{(1)}$. James Lepowsky and Mirko Primc

48 Analytic functions of one complex variable. Chung-chun Yang and Chi-tai Chuang, Editors

49 Complex differential geometry and nonlinear differential equations. Yum-Tong Siu, Editor

51 Nonlinear problems in geometry. Dennis M. DeTurck, Editor

53 The Selberg trace formula and related topics. Dennis A. Hejhal, Peter Sarnak, and Audrey Anne Terras, Editors

54 Differential analysis and infinite dimensional spaces. Kondagunta Sundaresan and Srinivasa Swaminathan, Editors

55 Applications of algebraic K-theory to algebraic geometry and number theory. Spencer J. Bloch, R. Keith Dennis, Eric M. Friedlander, and Michael R. Stein, Editors
The AMS-IMS-SIAM Joint Summer Research Conference in the Mathematical Sciences on Applications of Algebraic K-Theory to Algebraic Geometry and Number Theory was held at the University of Colorado, Boulder on June 12–18, 1983 with support from the National Science Foundation Grant MCS-8218075.

1980 Mathematics Subject Classification. Primary 18F25, 16A54; Secondary 19E, 19F.
# TABLE OF CONTENTS

## PART I

| Introduction | ix |
| List of Talks | xi |
| List of Participants | xiii |
| Higher regulators of modular curves | 1 |
| Notes on absolute Hodge cohomology | 35 |
| The K-theory of triangular matrix rings | 69 |
| A note on Gersten's conjecture in the mixed characteristic case | 75 |
| $K_2$ and L-functions of elliptic curves: Computer calculations | 79 |
| Cyclic homology and the algebraic K-theory of spaces I | 89 |
| Local class field theory for curves | 117 |
| Conjectural calculations of general linear group homology | 135 |
| Some remarks on the K-theory of fields | 149 |
| The K-theory of twisted complexes | 159 |
| Simplicial objects in a Grothendieck topos | 193 |
| Milnor K-theory and the Chow group of zero cycles | 241 |
| Global class field theory of arithmetic schemes | 255 |
| $K_n$, $SK_n$ of integral group-rings and orders | 333 |
| K-theory and Chow groups on singular varieties | 339 |

INTRODUCTION

During the week of June 12-18, 1983, a research conference on APPLICATIONS OF ALGEBRAIC K-THEORY TO ALGEBRAIC GEOMETRY AND NUMBER THEORY was held at the University of Colorado in Boulder under the auspices of the American Mathematical Society with funding from the National Science Foundation. This volume contains the Proceedings resulting from that conference.

The diversity of recent work in pure and applied algebraic K-theory is evident from the talks given at the conference as well as the papers in this volume. Although algebraic K-theory grew from topology and the ideas of Grothendieck on the Riemann-Roch theorem, it acquired a character of its own from the algebraic work initiated by Bass, Swan and Milnor, which focused in large part on matrices and matrix-related constructions. Bass and Tate realized the significance of $K_2$ for arithmetic. Then Quillen gave an extraordinarily flexible reformulation of the foundations of the subject which paved the way for rich and varied interactions with algebraic geometry and topology.

The matrix/vector bundle tradition of concrete computations for specific rings is represented here, for example, by the papers of Berrick-Keating, Dwyer-Friedlander, Hurrelbrink-Kolster, Rehmann, Swan-Vaserstein, Vaserstein and Weibel. It is on these foundations that general conjectures are formulated and tested.

Much of the interaction with algebraic geometry focusses now on algebraic cycles rather than vector bundles; the papers of Pedrini-Weibel and Kato exemplify this. This approach shades off into arithmetic: Kato-Saito study the arithmetic of 0-cycles on arithmetic schemes, providing a generalization of Artin reciprocity by interpreting splitting of primes in abelian coverings of schemes of finite type over $\mathbb{Z}$ in terms of rational equivalence of 0-cycles. The analogous class field theory for curves over local fields is discussed by Coombes.

An important new direction in K-theory and arithmetic involves generalizing the regulator map for units (read "$K_1"$$)$ in an
algebraic number field to the higher K-groups of varieties over number fields. A conjecture of Beilinson interprets certain transcendental numbers obtained in this way in terms of the values of L-functions. These ideas are discussed in the papers of Beilinson, Bloch, Bloch-Grayson, Ramakrishnan, and Wagoner.

The important advances in the K-theory of fields made by Merkurjev and Suslin are reported on in the papers by Dwyer and Friedlander, Merkurjev, and Wadsworth. Many other topics ranging from the connections of K-theory with Hochschild homology and cyclic homology to the applications of K-theory to sums of squares were discussed at the conference. Although all topics discussed are not represented in these Proceedings, ample material remains to occupy the interested reader.

The success of this conference is due to the hard work of many individuals and the generous support of two organizations. We would like to take this opportunity to thank them. The National Science Foundation provided financial support while the American Mathematical Society offered its organizational skills and support staff. The University of Colorado in Boulder provided the beautiful surroundings in which the conference took place. Ronnie Wells gave his help during the planning of the conference. The efforts of Carole Kohanski were indispensable.

The Editors
LIST OF TALKS

Invited Addresses

W. G. Dwyer, Conjectural calculations of the cohomology of general linear groups.
J.-L. Loday, Homology of Lie algebras of matrices and cyclic homology.
S. Bloch, Algebraic K-theory and L-functions, I.
A. Merkurjev, \( K_2 \) of fields and the Brauer group.
C. Soulé, P-adic K-theory of elliptic curves.
W. G. Dwyer, A survey of Suslin's recent work on the Lichtenbaum conjectures.
K. Kato, Algebraic K-theory and class field theory.
A. Merkurjev, A survey of Suslin's work on the torsion in \( K_2 \) of fields.
S. Bloch, Algebraic K-theory and L-functions, II.
R. Thomason, Bott stability in algebraic K-theory.
R. Charney, Excision and the K-theory of orders.
W. Van der Kallen, Relative \( K_2 \) of truncated polynomial rings.
D. Kazhdan, Analytic K-theory.
J. Wagoner, Transcendental and étale p-adic regulators.

Special Sessions

K-Theory and Algebraic Geometry

W. Raskind, \( K_0 \) cohomology and chow groups of varieties over p-adic fields.
J. Stienstra, Cartier Dieudonné theory for chow groups.
J. Murre, Application of Mercurjev-Suslin to algebraic cycles
C. Pedrini, K-theory and chow groups on singular varieties.
B. Dayton, \( K_0 \) regularity and seminormality.
S. Landsburg, K-theory and relative cycles.
Y. Nisnevich, Conjecture on rationally trivial torsions.
K. Kato, Relative 0-cycles and Lang's class-field theory.
LIST OF TALKS

Special Sessions

Connections with Topology
- H. Gillet, K-theory of local hensel rings.
- C. Weibel, Pedersen's developing of K-theory.
- J. Jardine, Simplicial objects in a Grothendieck topos.
- R. Charney, Compactifications of moduli spaces.
- L. Vaserstein, On $K_1$-theory of topological spaces.
- V. Snaith, Algebraic K-theory and topological K-theory.
- D. Burghelea, Homotopical applications of hermitian algebraic K-theory.

Cohomology and $K_1$
- B. Magurn, Injective stability for cyclic groups.
- S. Geller, Subgroups of congruence level $I^2$.
- T. Vorst, Some stability results for $K_1$.
- C.-H. Sah, Schur multipliers for classical Lie groups.
- R. Oliver, An exact sequence involving $K_2(\mathbb{Z}_p)$, $K_1(\mathbb{Z}_p)$.
- D. Grayson, Semistability and reduction theory.
- M. Krusemeyer, Possible computations of $SK_1$ for plane cubic curves.
- J. Huebschmann, The topology of $\mathbb{F}_q^+$ and $\text{BGL}(\mathbb{F}_q)^+$.

Number Theory
- D. Goss, Arithmetic theory of algebraic curves over finite fields.
- M. Kolster, On the Birch-Tate conjecture for maximal real subfields of cyclotomic fields.
- J. Hurrelbrink, On the orders of $K_2(0)$ in some cyclotomic cases.
- S. Rosset, A reciprocity formula for $K_2$-traces.
- J. S. Hsia, An application of K-theory to sums of squares.
- J. Queyru, Galois modules structures.
- U. Rehmann, A metaplectic theorem for certain anisotropic groups.
- A. Bak, $K_2$-analogs of Hasse's norm theorems.
