## Preface

The first Workshop on Geometric Evolution Equations was held in the National Center for Theoretical Sciences at National Tsing Hua University in Hsinchu, Taiwan from July 15 to August 14, 2002. It was a fun and exciting conference and we hope that the papers in this volume will convey some of the spirit of the conference. There are 14 papers contained in this volume on various topics in geometric evolution equations and related fields. These topics range from the minimal surface equation, mean curvature flow, harmonic map flow, Calabi flow, Ricci flow (including a numerical study), Kähler-Ricci flow, function theory on Kähler manifolds, flows of plane curves, convexity estimates, and the Christoffel-Minkowski problem.

The organizers would like to express their gratitude to NCTS staff members Wendy Huang, Vickey Sun, and Chia-Yu Twu for all of their help related to the workshop. We are indebted to Professor Dong-Ho Tsai for his help in making local arrangements. We also would like to thank Professors Jing Yu and Shing-Tung Yau for their support of the program. Thanks to Edward Dunne, Jennifer Sharp, and Christine Thivierge at the AMS for all of their assistance and encouragement in making the publication of this volume possible. We are grateful to the NCTS and Acer Foundation for their financial support of the workshop.

B.C. would like to thank Classic Dimension for encouragement and support.

The Workshop on Geometric Evolution Equations was a gathering of experts that produced this comprehensive collection of articles. Many of the papers relate to the Ricci flow and Hamilton's program for understanding the geometry and topology of 3-manifolds.

The use of evolution equations in geometry can lead to remarkable results. Of particular interest is the potential solution of Thurston's Geometrization Conjecture and the Poincaré Conjecture. Yet applying the method poses serious technical problems. Contributors to this volume explain some of these issues and demonstrate a noteworthy deftness in the handling of technical areas.

Various topics in geometric evolution equations and related fields are presented. Among other topics covered are minimal surface equations, mean curvature flow, harmonic map flow, Calabi flow, Ricci flow (including a numerical study), Kähler-Ricci flow, function theory on Kähler manifolds, flows of plane curves, convexity estimates, and the Christoffel-Minkowski problem.

The material is suitable for graduate students and researchers interested in geometric analysis and connections to topology.

Related titles of interest include *The Ricci Flow: An Introduction*.
