The spaces we need most are spaces we haven't discovered yet.

Tadeusz Iwaniec, October 2003.

Contents

Preface	vii
Program	ix
The maximum principle for vector fields FRANK H. BEATROUS, THOMAS J. BIESKE, AND JUAN J. MANFREDI	1
A partial classification of the blowups of the singularities in a composite membrane problem IVAN BLANK	11
$C^{1,\alpha}$ -regularity for p -harmonic functions in the Heisenberg group for p near 2 ANDRÁS DOMOKOS AND JUAN J. MANFREDI	17
Notes on p -harmonic analysis LUIGI D'ONOFRIO AND TADEUSZ IWANIEC	25
A condition sufficient for the partial regularity of minimizers in two-dimensional nonlinear elasticity M. FOSS	51
Dynamics on bounded domains CHIARA FROSINI	99
On the rate of tangential convergence of functions from Hardy spaces, $0 < p < 1$ KATHRYN E. HARE AND ALEXANDER M. STOKOLOS	119
Counter-examples of regularity in variable exponent Sobolev spaces PETER A. HÄSTÖ	133
Quasiregular gradient mappings and strong solutions of elliptic equations LEONID V. KOVALEV AND DAVID OPÉLA	145
Harmonic, monogenic and hypermonogenic functions on some conformally flat manifolds in R^n arising from special arithmetic groups of the Vahlen group R. S. KRAUSSHAR, YUYING QIAO, AND JOHN RYAN	159
On symmetry and uniform rectifiability arising from some overdetermined elliptic and parabolic boundary conditions JOHN L. LEWIS	175
Recent progress on the Monge-Ampère equation LILIANA FORZANI AND DIEGO MALDONADO	189

Mappings of finite distortion: Future directions and problems JANI ONNINEN	199
Riemann-Hurwitz formula and Morse theory MAŁGORZATA STAWISKA	209

Preface

This volume comprises all the contributed papers for the IIIrd Prairie Analysis Seminar, which took place on October 17-18, 2003, at Kansas State University in Manhattan, Kansas. The Prairie Analysis Seminar is a yearly event organized jointly by Kansas State University and the University of Kansas. Visit the web-site <http://www.math.ksu.edu/main/events/special/onetime/pas3> for more information on this event.

One of the unique features of this seminar is that the organizers invite one main speaker who is then asked to invite two more speakers of his/her choice. This allows the main speaker to give the conference a strong personal imprint. The organizers then issue an open call for contributed talks, which attracts several other speakers.

At the IIIrd Prairie Analysis Seminar the Main Speaker was Tadeusz Iwaniec, “John Raymond French” Distinguished Professor of Mathematics at Syracuse University, author of a recent important book with G. Martin: *Geometric Function Theory and Nonlinear Analysis*, and winner of the Prix 2001 Institut Henri-Poincaré Gauthier-Villars for the paper “Quasiharmonic Fields”, *Ann. Inst. H. Poincaré Analyse Nonlineaire* (2001) 519-572. Famous for his long list of coauthors, Professor Iwaniec’s interests range over

- Linear and Nonlinear Elliptic PDEs (Very weak solutions, L^p - regularity theory, Orlicz-Sobolev type estimates, Differential forms).
- The Calculus of Variations (Weak convergence methods, Jacobian determinants and null Lagrangians, Polyconvex and quasiconvex functionals).
- Deformations of Finite Distortion (Functions of one complex variable, Quasiregular mappings in \mathbb{R}^n and the governing PDEs, Topological properties of weakly differentiable mappings between Riemannian manifolds).
- Harmonic Analysis Methods (Singular integrals –sharp estimates–, Interpolation and nonlinear commutators, Hardy spaces).
- Applications in applied mathematics (nonlinear elasticity, material science, microstructure of crystals, and so forth).

The two other invited speakers chosen by T. Iwaniec were John Lewis from the University of Kentucky and Juan Manfredi from the University of Pittsburgh.

J. Lewis’s interests range from classical complex analysis to the theory of quasiregular maps, potential theory, elliptic and parabolic equations, Navier-Stokes equations, and many other topics. Most notable is his recent contribution to the solution of Kato’s conjectures for elliptic differential operators.

J. Manfredi’s work is on the partial differential equations that govern the nonlinear potential theory of quasi-regular mappings in higher dimensions and their subelliptic extensions. His more recent work has focused on the infinity-Laplacian equation.

Hence the field of analysis represented at the Third Prairie Analysis Seminar is an ever-changing discipline with deep roots in classical one-variable complex analysis and partial differential equations. Its more recent aspects touch on very advanced tools from functional analysis, potential theory, and calculus of variations. We hope that the articles that follow will give an idea of the many directions that are being explored.

Sincere thanks must be extended to the founders of the Prairie Analysis Seminar: Marianne Korten and Charles Moore of Kansas State University, and Estela Gavosto and Rodolfo Torres of the University of Kansas, who also helped with the organizational details and in obtaining the necessary funding. The conference was generously sponsored by the Departments of Mathematics at Kansas State University and at the University of Kansas; by the Mathematical Sciences Research Institute in Berkeley, California; and by the National Science Foundation, Grant DMS-0349394. Finally, we are deeply grateful for the help of our secretarial staff, especially that of Sheree Walsh.

Pietro Poggi-Corradini
Manhattan, KS, June 2004

Full Program of the IIIrd Prairie Analysis Seminar

Friday October 17

12:00-12:25 Registration

12:25-12:30 Welcome remarks

12:30-12:50 Artem Zvavitch, University of Missouri-Columbia
The Busemann-Petty problem for Gaussian measures

12:55-1:15 Roger W. Barnard, Texas Tech University
Minimal harmonic measure on complimentary regions

1:20-1:40 Brock Williams, Texas Tech University
Constructing Conformal Maps of Physical Surfaces Using Circle Packings

1:45-2:05 Sergei Merenkov, University of Michigan
Determining biholomorphic equivalence of manifolds from their semigroups of holomorphic self-maps

2:20-3:10 Tadeusz Iwaniec, Syracuse University
 p -harmonic equations I

3:10-3:30 Tea time

3:30-4:20 John Lewis, University of Kentucky
Symmetry Theorems and Uniform Rectifiability

4:30-4:50 Peter Hasto, University of Michigan
Variable exponent Lebesgue and Sobolev spaces

4:55-5:15 Luigi D'Onofrio, Università di Napoli and Syracuse University
The p -Harmonic Transform Beyond its Natural Domain of Definition, Interpolation and Continuity

5:20-5:40 James Peirce, UC Davis
Results on the Lagrangian averaged Navier-Stokes Equations

5:45-6:05 Caroline Sweezy, New Mexico State University
Subspaces of weak L -infinity

6:10-6:30 Mikil Foss, Kansas State University
A condition sufficient for partial regularity of minimizers in two-dimensional nonlinear elasticity

8:00 - ... After-dinner party at Emmily's and Pietro's home

Saturday October 18

8:00-8:20 Leonid Kovalev, Washington University in St. Louis
Comparison theorems for the one-dimensional Schrödinger equation

8:25-8:45 Virginia Naibo, University of Kansas
The universal maximal operator on special classes of functions

8:50-9:10 Genevra Neumann, Kansas State University
Valence of Harmonic Functions

9:15-9:35 Chiara Frosini, Università di Firenze
Holomorphic Dynamics on bounded domains

- 9:35-9:50 Coffee break
- 9:50-10:15 Gerard Ornas, McNeese State University
Extremal Values for a Class of Functionals over Hyperbolically Convex Functions
- 10:20-10:40 Robert Smits, New Mexico State University
Heat Kernels in Some Self-Similar Domains
- 10:45-11:05 Christian Wolf, Wichita State University
Measures of maximal dimension for hyperbolic diffeomorphisms
- 11:10-11:30 Ivan Blank, University of Louisville
Eliminating Mixed Asymptotics in Obstacle Type Free Boundary Problems
- 11:30 - 12:30 Lunch provided by the Department of Mathematics
- 12:30-12:50 Diego Maldonado, University of Kansas
Properties of the solutions to the Monge-Ampere equation
- 12:55-1:15 Byung-Geun Oh, Purdue University
Zeros of the Derivatives of Faber Polynomials Associated with a Universal Covering Map
- 1:20-1:40 John Ryan, University of Arkansas
Dirac operators, automorphic forms and Hardy spaces on some conformally flat manifolds
- 1:45-2:05 Jani Onninen, University of Michigan
Mappings of finite distortion: The sharp modulus of continuity
- 2:20-3:10 Tadeusz Iwaniec, Syracuse University
p-harmonic equations II
- 3:10-3:30 Tea time
- 3:30-4:20 Juan Manfredi, University of Pittsburgh
p-Harmonic functions in Euclidean space and in the Heisenberg group
- 4:30-4:50 Thomas Bieske, University of South Florida
Absolute Minimizers and Infinite Harmonic Functions in Carnot Groups
- 4:55-5:15 Petronela Radu, Carnegie Mellon University
Weak solutions of semilinear wave equations
- 5:20-5:40 Alexander Stokolos, DePaul University Chicago
A note on the Gurov-Reshetnyak Lemma
- 5:45-6:05 Malgorzata Stawiska, Purdue University
Riemann- Hurwitz formula and Morse theory
- 6:10-6:30 Clint Richardson, Stephen F. Austin State University
Concentration of Area in Half-planes

- 343 **N. Sthanumoorthy and Kailash C. Misra, Editors**, Kac-Moody Lie algebras and related topics, 2004
- 342 **János Pach, Editor**, Towards a theory of geometric graphs, 2004
- 341 **Hugo Arizmendi, Carlos Bosch, and Lourdes Palacios, Editors**, Topological algebras and their applications, 2004
- 340 **Rafael del Río and Carlos Villegas-Blas, Editors**, Spectral theory of Schrödinger operators, 2004
- 339 **Peter Kuchment, Editor**, Waves in periodic and random media, 2003
- 338 **Pascal Auscher, Thierry Coulhon, and Alexander Grigor'yan, Editors**, Heat kernels and analysis on manifolds, graphs, and metric spaces, 2003
- 337 **Krishan L. Duggal and Ramesh Sharma, Editors**, Recent advances in Riemannian and Lorentzian geometries, 2003
- 336 **José González-Barrios, Jorge A. León, and Ana Meda, Editors**, Stochastic models, 2003
- 335 **Geoffrey L. Price, B. Mitchell Baker, Palle E.T. Jorgensen, and Paul S. Muhly, Editors**, Advances in quantum dynamics, 2003
- 334 **Ron Goldman and Rimvydas Krasauskas, Editors**, Topics in algebraic geometry and geometric modeling, 2003
- 333 **Giovanni Alessandrini and Gunther Uhlmann, Editors**, Inverse problems: Theory and applications, 2003
- 332 **John Bland, Kang-Tae Kim, and Steven G. Krantz, Editors**, Explorations in complex and Riemannian geometry, 2003
- 331 **Luchezar L. Avramov, Marc Chardin, Marcel Morales, and Claudia Polini, Editors**, Commutative algebra: Interactions with algebraic geometry, 2003
- 330 **S. Y. Cheng, C.-W. Shu, and T. Tang, Editors**, Recent advances in scientific computing and partial differential equations, 2003
- 329 **Zhangxin Chen, Roland Glowinski, and Kaitai Li, Editors**, Current trends in scientific computing, 2003
- 328 **Krzysztof Jarosz, Editor**, Function spaces, 2003
- 327 **Yulia Karpeshina, Günter Stolz, Rudi Weikard, and Yanni Zeng, Editors**, Advances in differential equations and mathematical physics, 2003
- 326 **Kenneth D. T-R McLaughlin and Xin Zhou, Editors**, Recent developments in integrable systems and Riemann-Hilbert problems, 2003
- 325 **Seok-Jin Kang and Kyu-Hwan Lee, Editors**, Combinatorial and geometric representation theory, 2003
- 324 **Caroline Grant Melles, Jean-Paul Brasselet, Gary Kennedy, Kristin Lauter, and Lee McEwan, Editors**, Topics in algebraic and noncommutative geometry, 2003
- 323 **Vadim Olshevsky, Editor**, Fast algorithms for structured matrices: theory and applications, 2003
- 322 **S. Dale Cutkosky, Dan Edidin, Zhenbo Qin, and Qi Zhang, Editors**, Vector bundles and representation theory, 2003
- 321 **Anna Kamińska, Editor**, Trends in Banach spaces and operator theory, 2003

For a complete list of titles in this series, visit the
AMS Bookstore at www.ams.org/bookstore/.

Comprised of papers from the IIIrd Prairie Analysis Seminar held at Kansas State University, this book reflects the many directions of current research in harmonic analysis and partial differential equations. Included is the work of the distinguished main speaker, Tadeusz Iwaniec, his invited guests John Lewis and Juan Manfredi, and many other leading researchers.

The main topic is the so-called p -harmonic equation, which is a family of nonlinear partial differential equations generalizing the usual Laplace equation. This study of p -harmonic equations touches upon many areas of analysis with deep relations to functional analysis, potential theory, and calculus of variations.

The material is suitable for graduate students and research mathematicians interested in harmonic analysis and partial differential equations.
