Contents

Preface vii

Eigenconfigurations of tensors

HIROTACHI ABO, ANNA SEIGAL, and BERND STURMFELS 1

Sum of squares basis pursuit with linear and second order cone programming

AMIR ALI AHMADI and GEORGINA HALL 27

Helly’s theorem: New variations and applications

NINA AMENTA, JESÚS A. DE LOERA, and PABLO SOBERÓN 55

Representation theory of the symmetric group in voting theory and
game theory

KARL-DIETER CRISMAN and MICHAEL E. ORRISON 97

Modeling the distribution of distance data in Euclidean space

RUTH DAVIDSON, JOSEPH RUSINKO, ZOE VERNON, and JING XI 117

Geometric combinatorics and computational molecular biology: Branching
polytopes for RNA sequences

ELIZABETH DRELICH, ANDREW GAINER-DEWAR, HEATHER A.
HARRINGTON, QIJUN HE, CHRISTINE HEITSCH,
and Svetlana Poznanović 137

Polyhedral approaches to learning Bayesian networks

DAVID HAWS, JAMES CUSSENS, and MILAN STUDENÝ 155

Neural network coding of natural images with applications to
pure mathematics

CHRISTOPHER J. HILLAR and SARAH E. MARZEN 189

Proving Tucker’s Lemma with a volume argument

BEAUTTIE KUTURE, OSCAR LEONG, CHRISTOPHER LOA, MUTIARA
SONDJAJA, and FRANCIS EDWARD SU 223

Factorization invariants in numerical monoids

CHRISTOPHER O’NEILL and ROBERTO PELAYO 231

A survey of discrete methods in (algebraic) statistics for networks

SONJA PETROVIĆ 251
Preface

This Contemporary Mathematics volume was initiated by the same named special session at the 2015 AMS/MAA Joint Mathematics Meetings, and also celebrates the themes of an AMS Mathematics Research Community (MRC) in 2014. The MRC on Algebraic and Geometric Methods in Applied Discrete Mathematics was held June 15–21, 2014, at Snowbird Resort in Utah. The goal of the MRC was to introduce young mathematicians to research bridging pure and applied mathematics—specifically, the use of algebraic and geometric methods to solve applied discrete problems. Working groups at the MRC included combinatorial topology in the social sciences, representation theory in data analysis, combinatorics in molecular biology, algebraic and geometric approaches in neuroscience, and algebraic and geometric methods in optimization.

The 2015 AMS/MAA Joint Mathematics Meetings, held January 10–13 in San Antonio, featured a special session dedicated to the themes of the MRC. Talks in this session were presented by experts in fields connected to the MRC topics. Given the intense interest in this special session and the enthusiasm of the session speakers and MRC participants, it was suggested that proceedings of the session be collected in a book. The present volume is that book.

We are deeply grateful to Carina Curto, Jesus A. De Loera, Christine Heitsch, Michael Orrison, and Francis Edward Su for organizing the MRC program and supporting this volume. We have benefited immensely from your mathematical expertise, mentoring, and willingness to introduce young mathematicians to your research areas. We also express great thanks to the AMS staff, especially Ellen Maycock, Melissa Colton, and Robin Hagan Aguiar for your work in arranging the logistics of the MRC, and to Christine Thivierge for your assistance in preparing this volume. The MRC would not have been possible without funding from the National Science Foundation, which we also acknowledge with thanks.

Selected Published Titles in This Series

685  Heather A. Harrington, Mohamed Omar, and Matthew Wright, Editors, Algebraic and Geometric Methods in Discrete Mathematics, 2017

682  Gregory Arone, Brenda Johnson, Pascal Lambrechts, Brian A. Munson, and Ismar Volic, Editors, Manifolds and K-Theory, 2017

681  Shiferaw Berhanu, Nordine Mir, and Emil J. Straube, Editors, Analysis and Geometry in Several Complex Variables, 2017

680  Sergei Gukov, Mikhail Khovanov, and Johannes Walcher, Editors, Physics and Mathematics of Link Homology, 2016

679  Catherine Bénéteau, Alberto A. Condori, Constanze Liaw, William T. Ross, and Alan A. Sola, Editors, Recent Progress on Operator Theory and Approximation in Spaces of Analytic Functions, 2016

677  Delaram Kahrobaei, Bren Cavallo, and David Garber, Editors, Algebra and Computer Science, 2016

676  Pierre Martinetti and Jean-Christophe Wallet, Editors, Noncommutative Geometry and Optimal Transport, 2016

674  Bogdan D. Suceavă, Alfonso Carriazo, Yun Myung Oh, and Joeri Van der Veken, Editors, Recent Advances in the Geometry of Submanifolds, 2016

673  Alex Martsinkovsky, Gordana Todorov, and Kiyoshi Igusa, Editors, Recent Developments in Representation Theory, 2016

671  Robert S. Doran and Efton Park, Editors, Operator Algebras and Their Applications, 2016

669  Sergii Kolyada, Martin Möller, Pieter Moree, and Thomas Ward, Editors, Dynamics and Numbers, 2016

668  Gregory Budzban, Harry Randolph Hughes, and Henri Schurz, Editors, Probability on Algebraic and Geometric Structures, 2016

664  Dihua Jiang, Freydoon Shahidi, and David Soudry, Editors, Advances in the Theory of Automorphic Forms and Their L-functions, 2016

663  David Kohel and Igor Shparlinski, Editors, Frobenius Distributions: Lang-Trotter and Sato-Tate Conjectures, 2016

662  Zair Ibragimov, Norman Levenberg, Sergey Pinchuk, and Azimba Sadullaev, Editors, Topics in Several Complex Variables, 2016

This volume contains the proceedings of the AMS Special Session on Algebraic and Geometric Methods in Applied Discrete Mathematics, held on January 11, 2015, in San Antonio, Texas.

The papers present connections between techniques from “pure” mathematics and various applications amenable to the analysis of discrete models, encompassing applications of combinatorics, topology, algebra, geometry, optimization, and representation theory. Papers not only present novel results, but also survey the current state of knowledge of important topics in applied discrete mathematics.

Particular highlights include: a new computational framework, based on geometric combinatorics, for structure prediction from RNA sequences; a new method for approximating the optimal solution of a sum of squares problem; a survey of recent Helly-type geometric theorems; applications of representation theory to voting theory and game theory; a study of fixed points of tensors; and exponential random graph models from the perspective of algebraic statistics with applications to networks.

This volume was written for those trained in areas such as algebra, topology, geometry, and combinatorics who are interested in tackling problems in fields such as biology, the social sciences, data analysis, and optimization. It may be useful not only for experts, but also for students who wish to gain an applied or interdisciplinary perspective.
