SIDE III—Symmetries and Integrability of Difference Equations

Decio Levi
Orlando Ragnisco
Editors

The Centre de Recherches Mathématiques (CRM) of the Université de Montréal was created in 1968 to promote research in pure and applied mathematics and related disciplines. Among its activities are special theme years, summer schools, workshops, postdoctoral programs, and publishing. The CRM is supported by the Université de Montréal, the Province of Québec (FCAR), and the Natural Sciences and Engineering Research Council of Canada. It is affiliated with the Institut des Sciences Mathématiques (ISM) of Montréal, whose constituent members are Concordia University, McGill University, the Université de Montréal, the Université du Québec à Montréal, and the Ecole Polytechnique. The CRM may be reached on the Web at www.crm.umontreal.ca.

American Mathematical Society
Providence, Rhode Island USA

The production of this volume was supported in part by the Fonds pour la Formation de Chercheurs et l'Aide à la Recherche (Fonds FCAR) and the Natural Sciences and Engineering Research Council of Canada (NSERC).

2000 *Mathematics Subject Classification*. Primary 22Exx, 33–XX, 42Cxx, 39Axx, 53–XX.

Contents

List of Participants	xi
Preface	xv
Billiard Weak Solutions of Nonlinear PDE's and Toda Flows <i>Mark S. Alber, Roberto Camassa, and Michael Gekhtman</i>	1
Fourier–Gauss Transforms of Some q -Spectral Functions <i>N. M. Atakishiyev</i>	13
Integrable Differential-Difference Systems in $(2 + 1)$ -Dimensions and Their Hamiltonian Structure <i>Maciej Błaszak and Andrzej Szum</i>	23
Möbius Invariant Integrable Lattice Equations Associated with the General- ized KP Hierarchy <i>L. V. Bogdanov and B. G. Konopelchenko</i>	33
Wave Soliton Solutions on a Generic Background for KPI Equation <i>M. Boiti, F. Pempinelli, A. K. Pogrebkov, and B. Prināri</i>	47
Difference and Differential Equations and Convergence Acceleration Algorithms <i>C. Brezinski</i>	53
On the Dynamics of Rational Solutions for 1-D Volterra System <i>A. S. Cârstea</i>	65
Monodromy Data for the Discrete First Painlevé Hierarchy <i>Clio Cresswell</i>	73
Differential Identities, Generalized Polynomials and Applications in Physics and Mathematics <i>G. Dattoli</i>	83
Lattice Geometry of the Hirota Equation <i>Adam Doliwa</i>	93
Integrable Discrete Geometry: The Quadrilateral Lattice, Its Transforma- tions and Reductions <i>Adam Doliwa and Paolo Maria Santini</i>	101

On the Kleinian Construction of Abelian Functions of Canonical Algebraic Curves <i>J. C. Eilbeck, V. Z. Enolskii, and D. V. Leykin</i>	121
Discrete Equations and the Singular Manifold Method <i>P. G. Estévez and P. A. Clarkson</i>	139
Discrete Versions of Some Algebraic Integrable Systems Related to Generalized Jacobians <i>Yu. Fedorov</i>	147
New Potential Symmetries <i>Maria Luz Gandarias</i>	161
Symmetry Classification of Systems of Differential-Difference Equations <i>D. Gómez-Ullate Oteiza, S. Lafortune, and P. Winternitz</i>	167
Integrable Boundary Conditions for Nonlinear Lattices <i>I. T. Habibullin and A. N. Vil'danov</i>	173
Modular Invariants and Generalized Halphen Systems <i>J. Harnad and J. McKay</i>	181
Symmetry Preserving Discretization of the Burgers Equation <i>R. Hernández Heredero, D. Levi, and P. Winternitz</i>	197
Singularity Confinement and Degree Growth <i>Jarmo Hietarinta and Claude Viallet</i>	209
Time-Discretization of Soliton Equations <i>Ryogo Hirota and Masataka Iwao</i>	217
Bäcklund Transformations for the Hénon–Heiles and Garnier Systems <i>A. N. W. Hone, V. B. Kuznetsov, and O. Ragnisco</i>	231
Irregular Singular Behaviour in the First Discrete Painlevé Equation <i>N. Joshi</i>	237
Rational and Special Solutions of the P_{II} Hierarchy <i>Nicolai A. Kudryashov and Andrew Pickering</i>	245
Linearisable Systems and the Gambier Approach <i>S. Lafortune, B. Grammaticos, and A. Ramani</i>	255
Difference Equations of Poincaré–Perron Type and Central Two-Point Connection Problems <i>Wolfgang Lay</i>	263
Self-Similarity in Spectral Problems and q -Special Functions <i>Igor Loutsenko and Vyacheslav Spiridonov</i>	273
Lie Point Symmetries of Discrete and Continual $SU(\infty)$ Toda Field Theory <i>L. Martina</i>	295

A Note on Integrable Systems Related to Discrete Time Toda Lattice <i>Ken-ichi Maruno, Kenji Kajiwara, and Masayuki Oikawa</i>	303
The Integral Formula for the Solutions of the Quantum Knizhnik–Zamolodchikov Equation Associated with $U_q(\widehat{\mathfrak{sl}}_n)$ for $ q = 1$ <i>Tetsuji Miwa and Yoshihiro Takeyama</i>	315
Symmetries of the Discrete Schrödinger Equation and Its Quantum Deformations <i>Luis M. Nieto, Javier Negro, Francisco J. Herranz, and Angel Ballesteros</i>	329
Determinant and Pfaffian Solutions for Discrete Soliton Equations <i>Y. Ohta</i>	339
Difference Isomonodromy Problems and Discrete Painlevé Equations <i>Vassilios G. Papageorgiou</i>	347
Discrete Equations of Motion for A_{k-1} Algebra <i>A. P. Protogenov and V. A. Verbus</i>	353
Discrete Painlevé Equations from Nonisospectral Soliton Equations <i>G. R. W. Quispel and D. Levi</i>	363
A Study of the Continuous and Discrete Gambier Systems <i>A. Ramani, B. Grammaticos, and S. Lafortune</i>	367
Discrete Surfaces of Revolution <i>W. K. Schief and B. G. Konopelchenko</i>	381
Kac–Moody–Virasoro Algebras and Integrability of Certain Higher Dimensional Nonlinear Evolutionary Equations <i>M. Senthilvelan</i>	401
Different Faces of Harmonic Oscillator <i>Alexander Turbiner</i>	407
Nonsymmetric Linear Difference Equations for Multiple Orthogonal Polynomials <i>Walter Van Assche</i>	415
Asymptotics for Solution to the Cauchy Problem for Volterra Lattice with Step-like Initial Values <i>V. L. Vereschagin</i>	431
Complexity and Integrability <i>Claude Viallet</i>	439

Preface

The third meeting on “Symmetries and Integrability of Difference Equations” (SIDE III) was held in Sabaudia, a beautiful natural resort by the sea about 100 km south of Rome, Italy, from May the 16th till May the 22nd, 1998. This series of international meetings started in 1994: SIDE I was held in Estérel, Québec (near Montréal, Canada) and was organized under the auspices of the CRM (Centre de Recherches Mathématiques) of the Université de Montréal. A second meeting took place in 1996 at the University of Kent in Canterbury (UK). Information on the first SIDE meeting has been reported in *Symmetries and Integrability of Difference Equations*, edited by D. Levi, L. Vinet and P. Winternitz, AMS, 1996, and on the second in *Symmetries and Integrability of Difference Equations*, edited by P. A. Clarkson and F. W. Nijhoff, C.U.P., 1999. These meetings are intended to bring together specialists from various disciplines, all working or using methods from discrete integrable systems, i.e., systems that can be described by ordinary or partial difference equations and that allow for exact methods for their solutions. This domain forms the core of a great variety of fields, including classical and quantum physics, numerical analysis, discrete geometry, computer science, mathematical biology, economics, and so on. The subject of Discrete Systems and, in particular, of Discrete Integrable Systems has undergone a remarkable development in recent years: much progress has been made in the comprehension of the related mathematical structures. Moreover, among physicists and applied scientists in general there has been an increasing interest in discrete models, ranging from partial to ordinary difference equations to cellular automata. Accordingly, the Sabaudia meeting was pretty interdisciplinary in nature, and so is the present volume, which collects the lectures and talks therein delivered. We hope that it will provide a clear picture of the state of the art and give some insight into the most advanced research topics in the area.

The meeting attracted 72 participants from 19 countries (ordered according to the number of participants: Italy (13), Japan (10), Poland, Russia and Spain (6), Australia and Germany (4), Canada, France, Mexico, U.K and U.S.A. (3), Belgium (2), Finland, Greece, India, Romania, Sweden and Ukraine (1). Forty-five talks were delivered (among them, 12 1-hour “review lectures”) and 15 posters were presented. A large part of their content can be found in this volume, which includes contributions, covering the following interconnected and even overlapping subjects:

- *Lie-type symmetries of differential-difference and difference-difference equations*: M. L. Gandarias, D. Gomez-Ullate, R. H. Heredero, L. Martina, L. M. Nieto, M. Sentihilvelan;

- *Integrable differential-difference equations*: M. Alber, M. Blaszkak, C. Brezinski, A. Cârstea, I. Habibullin, B. Prinari;

- *Fully discrete integrable equations: from multidimensional lattices to cellular automata*: Y. Fedorov, R. Hirota, A. Hone, K. Kashiwara, K. Maruno, Y. Ohta, V. Verbus;

- *Discrete geometry and integrability*: L. Bogdanov, A. Doliwa, B. Konopelchenko, P. M. Santini, W. Schieff;

- *Continuous and discrete Painlevé equations and related problems*: P. G. Estevez, N. Joshi, N. Kudriashov, S. Lafortune, V. Papageorgiou, R. Quispel, A. Ramani;

- *Isomonodromy, spectral theory and related problems*: C. Cresswell, V. Enolskii, J. Harnad, W. Lay, V. Vereschagin;

- *Discrete dynamics: integrability and chaos*: J. Hietarinta, C. Viallet;

- *Difference and q -difference equations, special functions and orthogonal polynomials*: N. Atakashiev, G. Dattoli, V. Spiridonov, A. Turbiner, W. Van Assche;

- *Difference equations and quantum groups*: T. Miwa.

The success of the meeting has been confirmed by the unanimous decision to organize a SIDE IV workshop, which is planned to take place in Japan in fall 2000.

D. Levi
O. Ragnisco

Montréal, February 2000

SIDE III—Symmetries and Integrability of Difference Equations

Decio Levi and Orlando Ragnisco, Editors

This volume contains the proceedings of the third meeting on “Symmetries and Integrability of Difference Equations” (SIDE III). The collection includes original results not published elsewhere and articles that give a rigorous but concise overview of their subject, and provides a complete description of the state of the art. Research in the field of difference equations—often referred to more generally as discrete systems—has undergone impressive development in recent years. In this collection the reader finds the most important new developments in a number of areas, including: Lie-type symmetries of differential-difference and difference-difference equations, integrability of fully discrete systems such as cellular automata, the connection between integrability and discrete geometry, the isomonodromy approach to discrete spectral problems and related discrete Painlevé equations, difference and q -difference equations and orthogonal polynomials, difference equations and quantum groups, and integrability and chaos in discrete-time dynamical systems.

The proceedings will be valuable to mathematicians and theoretical physicists interested in the mathematical aspects and/or in the physical applications of discrete nonlinear dynamics, with special emphasis on the systems that can be integrated by analytic methods or at least admit special explicit solutions. The research in this volume will also be of interest to engineers working in discrete dynamics as well as to theoretical biologists and economists.
