CONTENTS

Foreword ........................................................................................................... vii

Riesz means on Riemannian manifolds ............................................................ 1
PIERRE H. BÉRARD

Some geometric aspects of wave motion: wavefront dislocations, diffraction
catastrophes, diffrajectals .............................................................................. 13
M. V. BERRY

On Cheeger’s inequality $\lambda_1 \geq \frac{\hbar^2}{4}$ ........................................... 29
PETER BUSER

Lowest-eigenvalue inequalities ...................................................................... 79
ISAAC CHAVEL

On the Hodge theory of Riemannian manifolds .............................................. 91
JEFF CHEEGER

Liouville Theorem for harmonic maps ............................................................ 147
SHIU-YUEN CHENG

Some inverse spectral results for negatively curved $n$-manifolds .................. 153
VICTOR GUilleMIN and DAVID KAZHDAN

On the spectrum of the Laplace operator on compact Riemann surfaces ........ 181
HEINZ HUBER

Schubert varieties and Poincaré duality ......................................................... 185
DAVID KAZHDAN and GEORGE LUSZTIG

Estimates of eigenvalues of a compact Riemannian manifold ....................... 205
PETER LI and SHING-TUNG YAU

The number of bound states of one-body Schroedinger operators and the Weyl
problem ..................................................................................................... 241
ELLIOTT H. LIEB

FOREWORD

The AMS Symposium on the Geometry of the Laplace Operator was held at the University of Hawaii at Manoa (Honolulu) from March 27th through 30th, 1979, in conjunction with the 764th meeting of the American Mathematical Society. The organizing committee consisted of David D. Bleecker and Robert Osserman (co-chairmen), Victor W. Guillemin, Henry P. McKean, Jr., Karen Uhlenbeck, Joel L. Weiner, and Alan Weinstein.

The present volume contains expanded versions of most of the invited lectures and a few contributed papers; it represents quite faithfully the range of topics discussed in the symposium.

We would like to thank all those whose work on the arrangements made the symposium a success. These include David Bleecker and Joel Weiner of the University of Hawaii, as well as Dorothy Smith and Heather MacDonald of the AMS. We are also grateful to NSF for financial support. We hope that in publishing this volume we will allow a much wider audience to share in some of the work and enthusiasm of the participants in the Symposium.

Robert Osserman
University of California, Berkeley

Alan Weinstein
