# Contents

Chapter 1. Introduction  
  1. Characteristic factors 1  
  2. Towers of factors 3  
  3. Cubes, norms, nilfactors, and structure theorems 4  
  4. Nilsequences in ergodic theory and in combinatorics 6  
Organization of the book  
Acknowledgments 8

**Part 1. Basics**  
Chapter 2. Background material  11  
  1. Groups and commutators 11  
  2. Probability spaces 14  
  3. Polish, locally compact, and compact abelian groups 20  
  4. Averages on a locally compact group 22  
References and further comments 24

Chapter 3. Dynamical Background  27  
  1. Topological dynamical systems 27  
  2. Ergodic theory 29  
  3. The Ergodic Theorems 36  
  4. Multiple recurrence and convergence 38  
  5. Joinings 40  
  6. Inverse limits of dynamical systems 42  
References and further comments 45

Chapter 4. Rotations  47  
  1. Topological and measurable rotations 47  
  2. The Kronecker factor 52  
  3. Decomposition of a system via the Kronecker 55  
References and further comments 59

Chapter 5. Group Extensions  61  
  1. Group extensions 61  
  2. Extensions by a compact abelian group 65  
  3. Cocycles and coboundaries 67  
References and further comments 78

**Part 2. Cubes**  
Chapter 6. Cubes in an algebraic setting  83

Chapter 13. Factors of nilsystems 221
1. Basics of factors of nilsystems 221
2. Quotient by a compact subgroup of the centralizer 227
3. Inverse limits of nilsystems and their intrinsic topology 231
References and further comments 234

Chapter 14. Polynomials in nilmanifolds and nilsystems 235
1. Polynomial sequences in a group 235
2. Polynomial orbits in a nilmanifold 242
3. Dynamical applications 247
References and further comments 252

Chapter 15. Arithmetic progressions in nilsystems 255
1. Arithmetic progressions in nilmanifolds and nilsystems 255
2. Ergodic decomposition 260
3. References and further comments 264

Part 4. Structure Theorems 265

Chapter 16. The Ergodic Structure Theorem 267
1. Various forms of the Ergodic Structure Theorem 267
2. Nilsequences and a nonergodic Structure Theorem 270
3. Factors of inverse limits of nilsystems 274
References and further comments 275

Chapter 17. Other structure theorems 277
1. A Topological Structure Theorem 278
2. The Inverse Theorem for Gowers norms 280
References and further comments 283

Chapter 18. Relations between consecutive factors 285
1. Starting the induction and an overview of the proof 285
2. First properties of the extension between consecutive factors 286
3. Cocycles of type $k$ 290
4. From cocycles of type $k$ to systems of order $k$ 294
5. Connectedness 297
References and further comments 302

Chapter 19. The Structure Theorem in a particular case 303
1. Strategy and preliminaries 303
2. Construction of a group of transformations 306
3. $X$ is a nilsystem 311
References and further comments 316

Chapter 20. The Structure Theorem in the general case 317
1. Further understanding of cocycles of type $k$ 317
2. Countability 321
3. General cocycles and the Structure Theorem 324
References and further comments 326
Part 5. Applications

Chapter 21. The method of characteristic factors
1. The van der Corput Lemma
2. Arithmetic progressions and linear patterns
3. Convergence of polynomial averages
References and further comments

Chapter 22. Uniformity seminorms on $\ell^\infty$
and pointwise convergence of cubic averages
1. Uniformity seminorms along a sequence of intervals
2. Relations with Gowers norms on $\mathbb{Z}_N$
3. Pointwise convergence of cubic averages
References and further comments

Chapter 23. Multiple correlations, good weights,
and anti-uniformity
1. Decompositions for multicorrelations
2. Bounding weighted ergodic averages
3. Anti-uniformity
4. A nilsequence version of the Wiener-Wintner Theorem
References and further comments

Chapter 24. Inverse results for uniformity seminorms
and applications
1. Inverse results for uniformity seminorms
2. Characterization of good weights for Multiple Ergodic Theorems
3. Correlation sequences and nilsequences
References and further comments

Chapter 25. The comparison method
1. Recurrence and convergence for the primes
2. Multiple polynomial averages along the primes
References and further comments

Index of Terms

\(\sigma\)-algebra, 14
  - completion of, 15
  - of order \(k\), 137
  - product, 16

abelianization, 179

action, 20
  - by automorphisms, 61
  - faithful, 100
  - faithful in measure, 312
  - free, 61, 315
  - group, 21
  - right, 61
  - transitive, 21, 315

adding machine, 51

affine system, 30, 31, 55
  - basic, 40
  - amenable, 22
  - anti-uniform, 376
  - function, 213
  - strongly \(k\)-anti-uniform, 376

Antolín Camarena, O., 105, 283

approximation of the unit, 312

arithmetic progression, 38, 333
  - in a group, 241, 256
  - in a nilmanifold, 256

Assani, I., 364, 383

Auslander, J., 112

Auslander, L., 192

Austin, T., 46, 346

automorphism, 13
  - group, 13
  - measure preserving system, 64
  - unipotent of class \(t\), 14

averages, 22
  - admits averages, 23
  - along a Følner sequence, 22

Cesàro, 24
  - cross section, 22
  - standard space, 14

Bourgain, J., 6, 347, 383, 406

Candela, P., 105, 283

Cauchy-Schwarz-Gowers Inequality
  - algebraic, 92
  - for sequences, 353
  - for the norm \(\|u^k(\mathbb{Z}/N)\|\), 355
  - for the norm \(\|u^k(G)\|\), 92
  - for the seminorm \(\|\cdot\|_k\), 124, 203
  - in a nilmanifold, 203

centralizer, 24

character, 21
  - additive, 22
  - multiplicative, 21

characteristic factor, 1, 138, 329, 336

Chu, Q., 275, 364

closing property, 59
  - for nilsequences, 279
  - in abelian groups, 59
  - in distal systems, 112
  - in homogeneous spaces, 102
  - unique, 102

co-boundary, 67, 68

co-compact, 158

cocycle, 82
  - affine, 82
  - ergodic, 82

Mackey group of \(a\), 73
  - of type \(k\), 290

cofinal, 43

cohomologous, 67

base point, 159
commutator, 11

group, 12

Nilsystems play a key role in the structure theory of measure preserving systems, arising as the natural objects that describe the behavior of multiple ergodic averages. This book is a comprehensive treatment of their role in ergodic theory, covering development of the abstract theory leading to the structural statements, applications of these results, and connections to other fields.

Starting with a summary of the relevant dynamical background, the book methodically develops the theory of cubic structures that give rise to nilpotent groups and reviews results on nilsystems and their properties that are scattered throughout the literature. These basic ingredients lay the groundwork for the ergodic structure theorems, and the book includes numerous formulations of these deep results, along with detailed proofs. The structure theorems have many applications, both in ergodic theory and in related fields; the book develops the connections to topological dynamics, combinatorics, and number theory, including an overview of the role of nilsystems in each of these areas. The final section is devoted to applications of the structure theory, covering numerous convergence and recurrence results.

The book is aimed at graduate students and researchers in ergodic theory, along with those who work in the related areas of arithmetic combinatorics, harmonic analysis, and number theory.
