AMS Bookstore at www.ams.org/bookstore/.

The collection contains articles on analysis, combinatorics, probability, theory of functions, and partial differential equations. In particular, the classical solvability of the Cauchy–Dirichlet problem for a class of parabolic systems, the solvability of the Dirichlet problem for quasilinear second order parabolic systems, estimates for solutions to uniformly elliptic systems, and generalizations of the embedding theorems are studied in several papers. In other papers, a new method for computation of the correlation dimension is described, generalizations of the fast Fourier transform method for wavelet expansions are presented, and the spectrum of the two-dimensional periodic magnetic Schrödinger operator is studied.
