

Contents

Introduction	105
1. Definition of an invariant	105
2. Invariants with values in $H^{d+1}(*, \mathbb{Q}/\mathbb{Z}(d))$	106
3. Classifying varieties of algebraic groups	108
4. Cycle modules and cohomology	110
5. K -cohomology of split tori and their principal homogeneous spaces	111
6. K -cohomology of simply connected algebraic groups and their principal homogeneous spaces	113
7. The group $Q(G)$	119
8. A theorem of B. Kahn	124
9. Definition of the Rost invariant	126
10. The order of the Rost invariant	130
11. Dynkin index for groups of type 1A	136
12. Dynkin index for groups of type 2A	138
13. Dynkin index for groups of type B	143
14. Dynkin index for groups of type C	144
15. Dynkin index for groups of type 1D or 2D	145
16. Dynkin index for exceptional groups	147
Appendix A. The groups $H^{d+1}(F, \mathbb{Q}/\mathbb{Z}(d))$	151
Appendix B. Tables of Dynkin indices	157
