| Chapter 1. Introduction | 1 |
| Chapter 2. General comments on references | 5 |
| Chapter 3. Examples of basic arithmetic groups | 7 |
| 3.1. \mathbb{Z} as a discrete subgroup of \mathbb{R} | 7 |
| 3.1.1. Poisson summation formula | 8 |
| 3.1.2. Riemann zeta function | 8 |
| 3.2. \mathbb{Z}^n and lattices in \mathbb{R}^n | 9 |
| 3.2.1. Lattices in \mathbb{R}^n | 10 |
| 3.2.2. Sphere packing | 11 |
| 3.2.3. Poisson summation formula for lattices in \mathbb{R}^n | 12 |
| 3.2.4. Weil-Siegel formula | 13 |
| 3.2.5. Voronoi formula | 13 |
| 3.2.6. Generalizations of the Poisson summation formula | 14 |
| 3.3. The modular group $SL(2, \mathbb{Z})$ | 15 |
| 3.3.1. Fundamental domain of $SL(2, \mathbb{Z})$ in the upper half plane | 15 |
| 3.3.2. Reduced quadratic forms and reduction theory | 16 |
| 3.3.3. Generators of $SL(2, \mathbb{Z})$ | 17 |
| 3.3.4. Volume formula for modular curves and locally symmetric spaces | 17 |
| 3.3.5. Moduli space of lattices | 17 |
| 3.3.6. Compactifications | 18 |
| 3.3.7. Deformation retraction to co-compact subspaces | 19 |
| 3.3.8. Geodesic flow, continued fractions and symbolic dynamics | 19 |
| 3.3.9. Congruence subgroups | 20 |
| 3.3.10. Dirichlet fundamental domain | 21 |
| 3.3.11. Finite generation of discrete groups | 22 |
| 3.3.12. Arithmetic Fuchsian groups | 23 |
| 3.3.13. Characterization of arithmetic Fuchsian groups | 23 |
| 3.4. Spectral theory of $\Gamma \backslash \mathbb{H}$ | 24 |
| 3.4.1. Weyl law | 25 |
| 3.4.2. Spectral decomposition | 25 |
| 3.4.3. Discrete spectrum and Selberg's $\frac{1}{4}$ -conjecture | 26 |
| 3.4.4. Selberg trace formula | 27 |

| | | |
|---|---|----|
| 3.4.5. | Generalized Weyl law | 28 |
| 3.4.6. | Phillips-Sarnak conjecture on cusp Mass forms and spectral degeneration | 28 |
| 3.4.7. | Counting lengths of geodesics—the generalized prime number theorem | 29 |
| 3.4.8. | Modular symbols | 30 |
| 3.4.9. | Selberg zeta function | 31 |
| 3.4.10. | Scattering geodesics and generalized Poisson relation | 32 |
| 3.4.11. | Modular forms and Maass forms | 33 |
| 3.4.12. | Automorphic representations | 34 |
| 3.4.13. | L -functions | 35 |
| 3.4.14. | Automorphic forms on adèle groups | 35 |
| 3.4.15. | Converse theorems for L -functions | 36 |
| 3.4.16. | Applications of modular forms | 36 |
| Chapter 4. General arithmetic subgroups and locally symmetric spaces | | |
| | | 37 |
| 4.1. | Algebraic groups | 37 |
| 4.2. | Definition of arithmetic subgroups | 38 |
| 4.3. | Hilbert modular groups | 39 |
| 4.4. | Congruence subgroups and the congruence kernel | 40 |
| 4.5. | Arithmetic subgroups as discrete subgroups of Lie groups | 41 |
| 4.6. | Zariski density of arithmetic subgroups | 42 |
| 4.7. | Symmetric spaces | 43 |
| 4.8. | Non-Riemannian symmetric spaces | 45 |
| 4.9. | Locally symmetric spaces | 45 |
| 4.10. | Space forms | 46 |
| 4.11. | Compactness criterion for locally symmetric spaces | 47 |
| 4.12. | Siegel sets and fundamental sets | 48 |
| 4.13. | Reduction theory for arithmetic subgroups | 49 |
| 4.14. | Precise reduction theory for arithmetic subgroups | 50 |
| 4.15. | Metric properties and \mathbb{Q} -rank of locally symmetric spaces | 51 |
| 4.16. | Volume spectrum of locally symmetric spaces | 52 |
| 4.17. | Maximal arithmetic subgroups and automorphism groups | 53 |
| 4.18. | Counting of volumes of hyperbolic manifolds | 54 |
| 4.19. | Counting of subgroups by index | 54 |
| Chapter 5. Discrete subgroups of Lie groups and arithmeticity of lattices in Lie groups | | |
| | | 57 |
| 5.1. | Crystallographic groups and Auslander conjecture | 57 |
| 5.2. | Lattices in nilpotent Lie groups and Margulis Lemma | 58 |
| 5.3. | Lattices in solvable Lie groups | 60 |
| 5.4. | Lattices in semisimple Lie groups | 61 |
| 5.5. | Characterization of arithmetic groups | 62 |
| 5.6. | Non-arithmeticity of lattices in rank 1 cases | 63 |

| | | |
|-------------|--|----|
| 5.7. | Arithmeticity of lattices in rank 1 cases | 63 |
| 5.8. | Linear discrete subgroups and Tits alternative | 64 |
| 5.9. | Reflection groups | 65 |
| 5.10. | Discrete groups related to Kac-Moody groups and algebras | 65 |
| 5.11. | Infinite dimensional Lie groups and discrete groups associated with them | 66 |
| Chapter 6. | Different completions of \mathbb{Q} and S -arithmetic groups over number fields | 69 |
| 6.1. | p -adic completions | 69 |
| 6.2. | S -integers | 69 |
| 6.3. | S -arithmetic subgroups | 70 |
| 6.4. | S -arithmetic subgroups as discrete subgroups of Lie groups | 70 |
| Chapter 7. | Global fields and S -arithmetic groups over function fields | 73 |
| 7.1. | Function fields | 73 |
| 7.2. | Global fields | 73 |
| 7.3. | S -arithmetic subgroups over function fields | 74 |
| Chapter 8. | Finiteness properties of arithmetic and S -arithmetic groups | 75 |
| 8.1. | Finite generation | 75 |
| 8.2. | Bounded generation | 76 |
| 8.3. | Finite presentations | 77 |
| 8.4. | Finiteness properties such as FP_∞ | 77 |
| 8.5. | Cofinite universal space for proper actions and arithmetic groups | 78 |
| 8.6. | Finiteness properties of arithmetic subgroups | 79 |
| Chapter 9. | Symmetric spaces, Bruhat-Tits buildings and their arithmetic quotients | 81 |
| 9.1. | Flats in symmetric spaces and the spherical Tits building | 81 |
| 9.2. | Bruhat-Tits buildings | 83 |
| 9.3. | Action of S -arithmetic subgroups on products of symmetric spaces and buildings | 83 |
| 9.4. | CAT(0)-spaces and CAT(0)-groups | 84 |
| 9.5. | Reduction theory for S -arithmetic subgroups | 85 |
| Chapter 10. | Compactifications of locally symmetric spaces | 87 |
| 10.1. | Why locally symmetric spaces are often noncompact | 87 |
| 10.2. | Compactifications of symmetric spaces | 87 |
| 10.3. | Limit sets of Kleinian groups and Patterson-Sullivan theory | 89 |
| 10.4. | Compactifications of locally symmetric spaces | 91 |
| 10.5. | Compactifications of Bruhat-Tits buildings | 92 |

| | | |
|-------------|---|-----|
| 10.6. | Compactifications for S -arithmetic groups | 93 |
| 10.7. | Geometry and topology of compactifications | 94 |
| 10.8. | Truncation of locally symmetric spaces | 94 |
| Chapter 11. | Rigidity of locally symmetric spaces | 97 |
| 11.1. | As special Riemannian manifolds | 98 |
| 11.2. | Local and infinitesimal rigidity of locally symmetric spaces | 98 |
| 11.3. | Global (strong) rigidity of locally symmetric spaces | 99 |
| 11.4. | Super-rigidity of lattices | 99 |
| 11.5. | Quasi-isometry rigidities of lattices | 100 |
| 11.6. | Rank rigidity of locally symmetric spaces | 102 |
| 11.7. | Entropy rigidity of locally symmetric spaces and simplicial volume | 102 |
| 11.8. | Rigidity of Hermitian locally symmetric spaces | 103 |
| 11.9. | Rigidity of pseudo-Riemannian locally symmetric spaces | 105 |
| 11.10. | Rigidity of non-linear actions of lattices: Zimmer program | 106 |
| 11.11. | Rigidity in von Neumann algebras | 109 |
| 11.12. | Topological rigidity and the Borel conjecture | 111 |
| 11.13. | Methods to prove the rigidities | 112 |
| 11.14. | Dynamics, flows on locally symmetric spaces and number theory | 113 |
| Chapter 12. | Automorphic forms and automorphic representations for general arithmetic groups | 115 |
| 12.1. | Automorphic forms | 115 |
| 12.2. | Boundary values of eigenfunctions and automorphic forms | 116 |
| 12.3. | Spectral decomposition | 117 |
| 12.4. | Weyl law | 118 |
| 12.5. | Counting of eigenvalues for a tower of spaces | 118 |
| 12.6. | Quantum chaos | 119 |
| 12.7. | Arthur-Selberg trace formula | 120 |
| 12.8. | Selberg zeta function | 121 |
| 12.9. | Counting of lengths of geodesics and volumes of tori | 122 |
| 12.10. | L -functions of automorphic representations | 122 |
| 12.11. | Meromorphic continuation of Eisenstein series | 123 |
| 12.12. | Constant term of Eisenstein series | 124 |
| 12.13. | Langlands program | 124 |
| 12.14. | Spectral theory over function fields: an example | 125 |
| Chapter 13. | Cohomology of arithmetic groups | 127 |
| 13.1. | Cohomology groups | 127 |
| 13.2. | L^2 - and L^p -cohomology of arithmetic groups | 128 |
| 13.3. | Intersection cohomology | 129 |
| 13.4. | Weighted cohomology | 129 |

| | | |
|---|---|-----|
| 13.5. | Continuous cohomology | 130 |
| 13.6. | Applications of automorphic forms to cohomology | 130 |
| 13.7. | Construction of cycles and relations to automorphic forms | 131 |
| 13.8. | Hecke trace formula on the cohomology groups | 131 |
| 13.9. | Euler characteristics, Gauss-Bonnet formula | 131 |
| 13.10. | Cohomology of S -arithmetic subgroups | 133 |
| 13.11. | Boundary cohomology | 133 |
| Chapter 14. K -groups of rings of integers and K -groups of group rings | | 135 |
| 14.1. | Definitions of algebraic K -groups | 135 |
| 14.2. | Finite generation of $K^i(\mathbb{Z})$ | 135 |
| 14.3. | Relations between $K^i(\mathbb{Z})$ and cohomology of the arithmetic groups $SL(n, \mathbb{Z})$ | 136 |
| 14.4. | Torsion elements of $K^i(\mathbb{Z})$ | 136 |
| 14.5. | Applications of $K_i(\mathbb{Z}[\Gamma])$ in topology | 137 |
| 14.6. | Farrell-Jones conjecture, Borel conjecture and Novikov conjecture | 137 |
| Chapter 15. Locally homogeneous manifolds and period domains | | 139 |
| 15.1. | Homogeneous manifolds as special Riemannian manifolds | 139 |
| 15.2. | Non-symmetric, but homogeneous spaces | 140 |
| 15.3. | Hodge structures, period domains and period maps | 141 |
| 15.4. | Homogeneous, non-Riemannian manifolds | 142 |
| 15.5. | Clifford–Klein forms of homogeneous spaces | 143 |
| 15.6. | Space forms: non-Riemannian case | 144 |
| 15.7. | Counting lattice points on homogeneous varieties | 145 |
| Chapter 16. Non-cofinite discrete groups, geometrically finite groups | | 147 |
| 16.1. | Geometrically finiteness conditions | 147 |
| 16.2. | Applications in low dimensional topology | 147 |
| 16.3. | Spectral theory of geometrically finite groups | 149 |
| Chapter 17. Large scale geometry of discrete groups | | 151 |
| 17.1. | Word metric on discrete groups and growth of groups | 151 |
| 17.2. | Geometric group theory and property (T) | 151 |
| 17.3. | Ends of groups | 152 |
| 17.4. | Ends of locally symmetric spaces and bottom of the spectrum | 154 |
| 17.5. | Asymptotic invariants | 157 |
| 17.6. | L^2 -invariants | 158 |
| 17.7. | Boundaries of discrete groups | 159 |
| 17.8. | Asymptotic geometry of locally symmetric spaces $\Gamma \backslash X$ | 161 |

| | | |
|-------------|--|-----|
| 17.9. | Isoperimetric profile, Dehn functions of arithmetic subgroups | 162 |
| 17.10. | Trees and applications in topology | 163 |
| Chapter 18. | Tree lattices | 165 |
| 18.1. | Structures of tree lattices | 165 |
| 18.2. | Arithmeticity and density of commensurability groups of tree lattices | 166 |
| 18.3. | Rigidity of lattices in products of trees and $CAT(0)$ groups | 167 |
| 18.4. | Building lattices and applications to fake projective planes | 167 |
| Chapter 19. | Hyperbolic groups | 169 |
| 19.1. | Basic properties of hyperbolic groups | 169 |
| 19.2. | Rips complex and Gromov boundary | 170 |
| Chapter 20. | Mapping class groups and outer automorphism groups of free groups | 173 |
| 20.1. | Mapping class groups | 173 |
| 20.2. | Teichmüller spaces of Riemann surfaces | 174 |
| 20.3. | Topology of moduli spaces of Riemann surfaces and the mapping class groups | 175 |
| 20.4. | Compactifications of Teichmüller spaces | 176 |
| 20.5. | Symmetry of Teichmüller spaces | 178 |
| Chapter 21. | Outer automorphism group of free groups and the outer spaces | 179 |
| 21.1. | Outer automorphism group of free groups | 179 |
| 21.2. | Outer spaces | 179 |
| 21.3. | Compactifications of outer spaces | 180 |
| 21.4. | Outer automorphism group of non-free groups | 181 |
