

Contents

The symbol \star denotes either a more advanced section, or else a bit of a digression, which can be skipped without interrupting the flow of the rest of the book.

Preface	vii
Chapter 1. Introduction and Motivation	1
1.1. Structure of Physical Theories	1
1.2. Some Basics of String Theory	3
1.3. Dualities Related to String Theory	7
1.4. \star More on S-Duality and AdS/CFT Duality	10
Chapter 2. K -Theory and its Relevance to Physics	13
2.1. A Quick Review of Topological K -Theory	13
2.2. K -Theory and D-Brane Charges	21
2.3. K -Homology and D-Brane Charges	22
Chapter 3. A Few Basics of C^* -Algebras and Crossed Products	25
3.1. Basics of C^* -Algebras	25
3.2. K -Theory of C^* -Algebras	29
3.3. Crossed Products	33
Chapter 4. Continuous-Trace Algebras and Twisted K -Theory	37
4.1. Continuous-Trace Algebras and the Brauer Group	37
4.2. Twisted K -Theory	40
4.3. \star The Theory of Gerbes	42
Chapter 5. More on Crossed Products and Their K -Theory	47
5.1. A Categorical Framework	47
5.2. Connes' Thom Isomorphism	51
5.3. The Pimsner-Voiculescu Sequence	52
Chapter 6. The Topology of T-Duality and the Bunke-Schick Construction	55
6.1. Topological T-Duality	55
6.2. The Bunke-Schick Construction	57
Chapter 7. T-Duality via Crossed Products	63
7.1. Group Actions on Continuous Trace-Algebras	63
7.2. The Raeburn-Rosenberg Theorem	68
Chapter 8. Higher-Dimensional T-Duality via Topological Methods	71
8.1. Higher-Dimensional T-Duality	71
8.2. A Higher-Dimensional Bunke-Schick Theorem	72

Chapter 9. Higher-Dimensional T-Duality via C^* -Algebraic Methods	77
9.1. Methodology and a Key Example	77
9.2. Uniqueness of Group Actions	78
9.3. The General Case	81
Chapter 10. Advanced Topics and Open Problems	85
10.1. Mirror Symmetry	85
10.2. Other Solutions to the Missing T-Dual Problem	87
10.3. ☆ Fourier-Mukai Duality	88
10.4. ☆ Refinements of K -Theory	93
10.5. Open Problems	94
Bibliography	95
Notation and Symbols	103
Index	107
