Preface	xi
Chapter 1. Sieve Questions	1
1.1. Inclusion-Exclusion	1
1.2. Some Generality	3
1.3. Some Examples	5
1.4. A Model of a Sifting Sequence for a Given Density	9
Chapter 2. Elementary Considerations on Arithmetic Functions	13
2.1. Dirichlet Convolution and Switching Divisors	13
2.2. Tchebyshev's Prime Sprigs	16
Chapter 3. Bombieri's Sieve	21
3.1. Heuristics for Estimating Sums over Primes	21
3.2. Almost-Primes	23
3.3. Multi-dimensional von Mangoldt Functions	24
3.4. Asymptotic Formula for $S_{(k)}(x)$	25
3.5. Application to Additive Convolutions	28
Chapter 4. Sieve of Eratosthenes-Legendre	31
Chapter 5. Sieve Principles and Terminology	35
5.1. Introduction	35
5.2. Cast of Characters	35
5.3. Sifting Weights	38
5.4. Main Terms and Remainders	39
5.5. The Sieve Dimension	42
5.6. Sums of the Local Densities	44
5.7. Sieve-Twisted Sums of the Density Function	45
5.8. Composition of Sieves	49
5.9. Reduced Composition of Sieve-Twisted Sums	50
5.10. An Example of a Reduced Composition	53
Chapter 6. Brun's Sieve – The Big Bang	55
6.1. Brun's Pure Sieve	55
6.2. Setting up a Sieve by Iterations	59
6.3. Compositions using Brun's Sieve	62
6.4. Choosing the Truncation Parameters	64
6.5. Fundamental Lemma	66
6.6. Improved Bounds for the Sifting Limits	71
6.7. Preliminary Sieving	73

6.8. A Cancellation in the Sieve Weights	75
6.9. Applications of Brun's Sieve	77
6.10. Extremely Short Intervals	80
Chapter 7. Selberg's Sieve – Kvadrater er Positive	89
7.1. General Upper-Bound Results	89
7.2. Comments on the Λ^2 -Sieve	93
7.3. Crossing Density Functions	98
7.4. Explicit Estimates for $J(D, z)$	103
7.5. From the Upper-Bound to the Lower-Bound	105
7.6. Selberg's Lower-Bound Sieve Directly	107
7.7. Three Formulas for the Composite Sieve $\Lambda - \Lambda^2$	112
7.8. Clearing the Sifting Range and a Neat Bound for $J(D)$	115
7.9. Asymptotic for $J(D, z)$	117
7.10. Explicit Estimates for the Main Term	118
7.11. Explicit Estimates for the Remainder	120
7.12. Selected Applications	121
7.13. Bounded Gaps Between Primes	122
7.14. Small Gaps Between Primes	133
7.15. Gaps Between Primes and Powers	137
Chapter 8. Sifting Many Residue Classes	139
8.1. Sifting Arbitrary Classes	139
8.2. Sieving for Squares	141
8.3. Ternary Quadratic Forms	144
Chapter 9. The Large Sieve	151
9.1. The Basic Inequality	151
9.2. The Large Sieve Inequality for Additive Characters	154
9.3. Equidistribution over Residue Classes	155
9.4. Arithmetic Large Sieve	157
9.5. Where Linnik meets Selberg: A Duet	159
9.6. The Large Sieve Inequality for Multiplicative Characters	162
9.7. The Larger Sieve of Gallagher	164
9.8. Equidistribution to Large Moduli	166
9.9. Limitations to Equidistribution	171
Chapter 10. Molecular Structure of Sieve Weights	173
10.1. Introduction	173
10.2. What the Upper Bound Leaves Behind	173
10.3. Contribution of Small Prime Factors	175
10.4. Partial Contributions	179
10.5. Related Instances	183
Chapter 11. The Beta-Sieve	185
11.1. Introduction: Buchstab Iterations	185
11.2. Cast of Characters	188
11.3. The Functions $F(s), f(s)$	190
11.4. The Functions $H(s), h(s)$ for $\kappa > \frac{1}{2}$	195
11.5. Connections with the Buchstab and Dickman Functions	200

11.6.	The Convergence Problem for $\kappa > \frac{1}{2}$	202
11.7.	Estimation of $f_n(s)$ for $0 \leq \kappa \leq \frac{1}{2}$	203
11.8.	Statement of the Main Theorems of the Beta-Sieve	205
11.9.	The Inductive Estimate for $V_n(D, z)$	207
11.10.	Direct Estimation of $V_n(D, z)$	210
11.11.	Completion of the Beta-Sieve for $\frac{1}{2} < \kappa \leq 1$	212
11.12.	Specializing to $\kappa \leq \frac{1}{2}$	213
11.13.	Estimation of $V_n(D, z)$	216
11.14.	Completion of the Beta-Sieve for $0 \leq \kappa \leq \frac{1}{2}$	218
11.15.	An Extension of the Sifting Range for $\kappa < \frac{1}{2}$	218
11.16.	Higher Dimension: Composing Beta-Sieves	220
11.17.	Estimation of $\mathcal{L}^+(D, z)$	221
11.18.	Asymptotic Evaluation of $V_n(D, z)$	223
11.19.	Estimates and Numerical Tables for the Sieve Constants	224
11.20.	p -adic Zeros of Ternary Quadratic Forms	226
11.21.	Representations by Norm Forms	229
11.22.	Sums of Two Cubic Norms	231
Chapter 12.	The Linear Sieve	235
12.1.	A Summary of Previous Results	235
12.2.	The True Asymptotics for Special Sifting Functions	237
12.3.	The Optimality of the Linear Sieve	240
12.4.	A Refinement of Estimates for the Error Terms	240
12.5.	Bounds for the Remainder	249
12.6.	Linear Sieve with Sharp Error Term	251
12.7.	The Remainder in a Well-Factorable Form	252
Chapter 13.	Applications to Linear Sequences	259
13.1.	Introduction	259
13.2.	Large Moduli	261
13.3.	Larger Moduli	263
13.4.	Short Intervals	267
13.5.	Large Primary Factors	271
Chapter 14.	The Semi-Linear Sieve	275
14.1.	Introduction	275
14.2.	A Summary of Previous Results	275
14.3.	First Application	277
14.4.	Asymptotic Semi-Linear Sieve	278
14.5.	Applications of the Asymptotic Semi-Linear Sieve	281
14.6.	Shifted Primes as a Sum of Two Squares	282
14.7.	Hyperbolic Prime Number Theorem	286
14.8.	Prime Points on the Sphere – Secret Challenge	293
Chapter 15.	Applications – Choice but not Prime	305
15.1.	Squarefree Values of Quadratic Polynomials	305
15.2.	Additive Convolution of Multiplicative Functions	310
15.3.	Points on Elliptic Curves	315
15.4.	Rational Points on a Cubic Surface	322

Chapter 16. Asymptotic Sieve and the Parity Principle	331
16.1. Distribution Functions	331
16.2. The Basic Theorem	332
16.3. Proof of the Basic Theorem	333
16.4. The Parity Phenomenon	337
16.5. The Dichotomy in Action	338
Chapter 17. Combinatorial Identities	345
17.1. Introduction	345
17.2. Sample Combinatorial Identities	346
17.3. An Identity for Composite Numbers	349
17.4. A Further Identity	350
Chapter 18. Asymptotic Sieve for Primes	355
18.1. Combinatorial Transformations	355
18.2. Coupled Exponents of Distribution	359
18.3. Finessing Bombieri's Sieve	360
18.4. Sifting for Primes in Lacunary Sequences	362
Chapter 19. Equidistribution of Quadratic Roots	373
19.1. Equidistribution Modulo One	373
19.2. Equidistribution Modulo Primes	374
19.3. The Poincaré Series	376
19.4. Estimation of Linear Forms	380
19.5. Estimation of Bilinear Forms	381
Chapter 20. Marching over Gaussian Primes	383
20.1. Introduction	383
20.2. Large Sieve for Quadratic Roots	384
20.3. Level of Absolute Distribution	386
20.4. Level of Bilinear Distribution	388
Chapter 21. Primes Represented by Polynomials	395
21.1. Introduction	395
21.2. Prime Values of Quadratic Polynomials in Two Variables	396
21.3. Primes Captured by $X^2 + Y^4$	397
21.4. Primes Represented by $X^3 + 2Y^3$	399
21.5. A Binary Polynomial of Higher Degree	402
Chapter 22. Level of Distribution of Arithmetic Sequences	405
22.1. Introduction	405
22.2. Primes in Arithmetic Progressions	405
22.3. Absolute Level for Additive Convolutions	409
22.4. Bilinear Level for Quadratic Polynomials	411
22.5. Truncations of Divisor Functions	414
22.6. Gaussian Sequences	417
22.7. Sum of Two Biquadrates	423
22.8. Binary Forms	429
22.9. Binary Cubic Forms with Twists	433
22.10. Level of Distribution Along Orbits	436

22.11. Future Prospects	440
Chapter 23. Primes in Short Intervals	441
23.1. Introduction	441
23.2. The Sieve Argument	443
23.3. Estimates for Dirichlet Polynomials	444
23.4. Triple Products in Short Intervals	450
23.5. Level of Bilinear Distribution	452
Chapter 24. The Least Prime in an Arithmetic Progression	453
24.1. Introduction	453
24.2. The Exceptional Case	454
24.3. A Parity-Preserving Sieve Inequality	457
24.4. Estimation of $\psi_{\mathfrak{X}}(x; q, a)$	459
24.5. Conclusion	461
24.6. Character Sums over Triple-Primes	461
24.7. Ghosts in the Sieve Opera House	464
Chapter 25. Almost-Prime Sieve	475
25.1. Introduction	475
25.2. Evaluation of the Weighted Sum	476
25.3. Richert's Weights	478
25.4. Almost-Prime Values of Polynomials	480
25.5. Further Applications	481
25.6. Twin Almost-Primes	482
Appendix A. Mean Values of Arithmetic Functions	487
A.1. Simple Estimates	487
A.2. Asymptotic Formulas for Full Sums	491
A.3. Asymptotic Formulas for Restricted Sums	494
A.4. The Linear Case	496
A.5. A Main Term Computation	498
A.6. Evaluation of $P_{(k)}(x)$	501
A.7. Evaluation of $h_{(k)}(x)$	503
A.8. Congruence Sums	504
Appendix B. Differential-Difference Equations	507
B.1. Adjoint Equations	507
B.2. Zeros of the Adjoint Function	511
B.3. The Largest Zeros of the Adjoint Polynomial	513
B.4. An Example	516
Bibliography	519
Index	525
