

Contents

Chapter 1 Introductory Discussion of Interpolation 1	Chapter 11 Interpolation by Translates of a Single Function 71
Chapter 2 Linear Interpolation Operators 11	Chapter 12 Positive Definite Functions 77
Chapter 3 Optimization of the Lagrange Operator 18	Chapter 13 Strictly Positive Definite Functions 87
Chapter 4 Multivariate Polynomials 25	Chapter 14 Completely Monotone Functions 94
Chapter 5 Moving the Nodes 32	Chapter 15 The Schoenberg Interpolation Theorem 101
Chapter 6 Projections 39	Chapter 16 The Micchelli Interpolation Theorem 109
Chapter 7 Tensor-Product Interpolation 46	Chapter 17 Positive Definite Functions on Spheres 119
Chapter 8 The Boolean Algebra of Projections 51	Chapter 18 Approximation by Positive Definite Functions 131
Chapter 9 The Newton Paradigm for Interpolation 57	Chapter 19 Approximate Reconstruction of Functions and Tomography 141
Chapter 10 The Lagrange Paradigm for Interpolation 62	

Chapter 20 Approximation by Convolution 148	Chapter 30 The Golomb-Weinberger Theory 223
Chapter 21 The Good Kernels 157	Chapter 31 Hilbert Function Spaces and Reproducing Kernels 232
Chapter 22 Ridge Functions 165	Chapter 32 Spherical Thin-Plate Splines 246
Chapter 23 Ridge Function Approximation via Convolutions 177	Chapter 33 Box Splines 260
Chapter 24 Density of Ridge Functions 184	Chapter 34 Wavelets, I 272
Chapter 25 Artificial Neural Networks 189	Chapter 35 Wavelets, II 285
Chapter 26 Chebyshev Centers 197	Chapter 36 Quasi-Interpolation 312
Chapter 27 Optimal Reconstruction of Functions 202	Bibliography 327
Chapter 28 Algorithmic Orthogonal Projections 210	Index 355
Chapter 29 Cardinal B-Splines and the Sinc Function 215	Index of Symbols 359
