Introduction	xi
List of symbols	xv
Chapter 0. Introduction and Prerequisites	1
Groups	2
Rings	6
Polynomials	9
Structure theories	12
Vector spaces and linear algebra	13
Bilinear forms and inner products	15
Appendix 0A: Quadratic Forms	18
Appendix 0B: Ordered Monoids	23
Exercises – Chapter 0	25
Appendix 0A	28
Appendix 0B	31
Part I. Modules	
Chapter 1. Introduction to Modules and their Structure Theory	35
Maps of modules	38
The lattice of submodules of a module	42
Appendix 1A: Categories	44

Chapter 2. Finitely Generated Modules	51
Cyclic modules	51
Generating sets	52
Direct sums of two modules	53
The direct sum of any set of modules	54
Bases and free modules	56
Matrices over commutative rings	58
Torsion	61
The structure of finitely generated modules over a PID	62
The theory of a single linear transformation	71
Application to Abelian groups	77
Appendix 2A: Arithmetic Lattices	77
Chapter 3. Simple Modules and Composition Series	81
Simple modules	81
Composition series	82
A group-theoretic version of composition series	87
Exercises — Part I	89
Chapter 1	89
Appendix 1A	90
Chapter 2	94
Chapter 3	96
Part II. Affine Algebras and Noetherian Rings	
Introduction to Part II	99
Chapter 4. Galois Theory of Fields	101
Field extensions	102
Adjoining roots of a polynomial	108
Separable polynomials and separable elements	114
The Galois group	117
Galois extensions	119
Application: Finite fields	126
The Galois closure and intermediate subfields	129
Chains of subfields	130

Application: Algebraically closed fields and the algebraic closure	133
Constructibility of numbers	135
Solvability of polynomials by radicals	136
Supplement: Trace and norm	141
Appendix 4A: Generic Methods in Field Theory: Transcendental Extensions	146
Transcendental field extensions	146
Appendix 4B: Computational Methods	150
The resultant of two polynomials	151
Appendix 4C: Formally Real Fields	155
Chapter 5. Algebras and Affine Fields	157
Affine algebras	161
The structure of affine fields – Main Theorem A	161
Integral extensions	165
Chapter 6. Transcendence Degree and the Krull Dimension of a Ring	171
Abstract dependence	172
Noether normalization	178
Digression: Cancellation	180
Maximal ideals of polynomial rings	180
Prime ideals and Krull dimension	181
Lifting prime ideals to related rings	184
Main Theorem B	188
Supplement: Integral closure and normal domains	189
Appendix 6A: The automorphisms of $F[\lambda_1, \dots, \lambda_n]$	194
Appendix 6B: Derivations of algebras	197
Chapter 7. Modules and Rings Satisfying Chain Conditions	207
Noetherian and Artinian modules (ACC and DCC)	207
Noetherian rings and Artinian rings	210
Supplement: Automorphisms, invariants, and Hilbert's fourteenth problem	214
Supplement: Graded and filtered algebras	217
Appendix 7A: Gröbner bases	220

Chapter 8. Localization and the Prime Spectrum	225
Localization	225
Localizing the prime spectrum	230
Localization to local rings	232
Localization to semilocal rings	235
Chapter 9. The Krull Dimension Theory of Commutative Noetherian Rings	237
Prime ideals of Artinian and Noetherian rings	238
The Principal Ideal Theorem and its generalization	240
Supplement: Catenarity of affine algebras	242
Reduced rings and radical ideals	243
Exercises – Part II	247
Chapter 4	247
Appendix 4A	257
Appendix 4B	258
Appendix 4C	262
Chapter 5	264
Chapter 6	264
Appendix 6B	268
Chapter 7	274
Appendix 7A	276
Chapter 8	277
Chapter 9	280
Part III. Applications to Geometry and Number Theory	
Introduction to Part III	287
Chapter 10. The Algebraic Foundations of Geometry	289
Affine algebraic sets	290
Hilbert’s Nullstellensatz	293
Affine varieties	294
Affine “schemes”	298
Projective varieties and graded algebras	303
Varieties and their coordinate algebras	308
Appendix 10A. Singular points and tangents	309

Chapter 11. Applications to Algebraic Geometry over the Rationals– Diophantine Equations and Elliptic Curves	313
Curves	315
Cubic curves	318
Elliptic curves	322
Reduction modulo p	337
Chapter 12. Absolute Values and Valuation Rings	339
Absolute values	340
Valuations	346
Completions	351
Extensions of absolute values	356
Supplement: Valuation rings and the integral closure	361
The ramification index and residue field	363
Local fields	369
Appendix 12A: Dedekind Domains and Class Field Theory	371
The ring-theoretic structure of Dedekind domains	371
The class group and class number	378
Exercises – Part III	387
Chapter 10	387
Appendix 10A	390
Chapter 11	391
Chapter 12	397
Appendix 12A	404
List of major results	413
Bibliography	427
Index	431
