Introduction	v
Universal unfoldings of Laurent polynomials and $tt^*$ structures CLAUDE SABBAH	1
From primitive forms to Frobenius manifolds KYOJI SAITO and ATSUSHI TAKAHASHI	31
Twistor structures, $tt^*$ -geometry and singularity theory CLAUS HERTLING and CHRISTIAN SEVENHECK	49
Differential geometric aspects of the $tt^*$ -equations VICENTE CORTÉS and LARS SCHÄFER	75
Hodge theoretic aspects of mirror symmetry LUDMIL KATZARKOV, MAXIM KONTSEVICH, and TONY PANTEV	87
A weight two phenomenon for the moduli of rank one local systems on open varieties CARLOS SIMPSON	175
Associativity for the Neumann system L.K. HOEVENAARS	215
Two-dimensional Gauge Theories and Quantum Integrable Systems ANTON A. GERASIMOV and SAMSON L. SHATASHVILI	239
Hurwitz numbers, matrix models and enumerative geometry VINCENT BOUCHARD and MARCOS MARIÑO	263
Background independence and the Open Topological String Wavefunction ANDREW NEITZKE and JOHANNES WALCHER	285
