

Contents

Introduction	ix
Chapter I. Introduction to Integrable Systems	1
I.1. Symplectic Manifolds	1
I.2. Hamiltonian Systems, Examples	6
I.3. Completely Integrable Systems	10
I.4. Geodesic Flows	13
I.5. Appendix: The Theorem of Darboux	18
Exercises	19
Chapter II. Action–Angle Variables	25
II.1. Hamiltonian Torus Actions	25
II.2. The Arnold–Liouville Theorem	29
II.3. Examples	36
Exercises	40
Chapter III. Integrability and Galois Groups	45
The Arnold–Liouville Theorem, Revisited Through Differential Galois Theory	45
III.1. Variational Equations, Galois Groups, and First Integrals	46
III.2. The Case of a Hamiltonian System	52
III.3. The Case of an Integrable System	55
III.4. Towards Applications: The Reduction	64
III.5. The Example of the Hénon–Heiles System	69
III.6. Appendix: Proof of Ziglin’s Lemma	72
Exercises	76
Chapter IV. An Introduction to Lax Equations	81
The Arnold–Liouville Theorem, Revisited Through Lax Equations	81
IV.1. Why Algebraic Curves?	82
IV.2. A Linearization Theorem	85
IV.3. The case of Geodesics on Quadrics	90
IV.4. Appendix: How to Construct Lax Equations (an Overview)	103
Exercises	109

Appendices

Appendix A. What One Needs to Know About Differential Galois Theory	117
A.1. Differential Fields	117
A.2. The Picard–Vessiot Extension	118
A.3. The Galois Group	120
A.4. The Galois Group of a Hamiltonian System is Symplectic	122
A.5. An Example: the Airy Equation	124
Easy Exercises on Differential Galois Theory	128
Appendix B. What One Needs to Know About Algebraic Curves	131
B.1. Complex Curves and Riemann Surfaces	131
B.2. Line Bundles on Curves	133
B.3. Sheaves and Cocycles	135
B.4. The Picard Group, the Riemann–Roch Theorem, the Jacobian	136
Exercises to Check Comprehension of the Definitions	139
Bibliography	141
Index	145
