
Contents

Introduction	vii
Chapter 1. A Little Set Theory	1
Equivalence relations	3
The Schröder-Bernstein Theorem	7
The problem of Invariance of Dimension	9
Chapter 2. Metric and Topological Spaces	15
Continuity	24
Chapter 3. Geometric Notions	29
Chapter 4. Building New Spaces from Old	45
Subspaces	46
Products	52
Quotients	56
Chapter 5. Connectedness	67
Path-connectedness	77
Chapter 6. Compactness	83
Chapter 7. Homotopy and the Fundamental Group	95

Chapter 8. Computations and Covering Spaces	111
Chapter 9. The Jordan Curve Theorem	129
Gratings and arcs	130
The index of a point not on a Jordan curve	141
A proof of the Jordan Curve Theorem	146
Chapter 10. Simplicial Complexes	151
Simplicial mappings and barycentric subdivision	159
Chapter 11. Homology	171
Homology and simplicial mappings	179
Topological invariance	181
Where from here?	198
Bibliography	201
Notation Index	207
Subject Index	209
